

Details

- Flexible cloth backing conforms to contours
- Convenient profile for sanding tight spots
- Durable backing combines with long-lasting abrasive
- Fast-cutting abrasive boosts productivity
- Great for light deburring to smooth edges

3M™ Cloth Sanding Abrasive Roll features tough, flexible cloth backing for sanding hard-to-reach areas. Our abrasive roll is long lasting and fast cutting. It's an excellent choice for deburring and metal finishing.

3M™ Cloth Sanding Abrasive Roll comes with a cloth backing that's flexible enough to sand hard-to-reach areas. Rolls provide a convenient profile for hand or jitterbug sanding in tight locations. Use these abrasive rolls for hand strapping, blending scuff marks, and cleaning parts with curved profiles such as pipes and tubes. Our abrasive roll has a durable cloth backing that combines with long-lasting abrasive to provide an extended service life.

Flexible cloth backing provides high conformability to reach more challenging locations that a stiffer backing is more likely to miss. To judge the flexibility of the backing, it's also important to consider its weight. As a general rule for evaluating these products, lighter weight backing offers more flexibility than heavier ones.

Our abrasive roll is also an excellent choice for light deburring, which is the process of removing the sharp metal fragments that are often left behind on the edge of freshly cut metal. Use this abrasive for knocking down the burrs occurring on flat edges, circular holes and drill holes. It will remove the sharp burrs and leave a smooth edge.

Tough, flexible cloth backing for sanding hard-to-reach area

When it comes to quality abrasives, grinding & sanding, 3M is the brand you can depend on.
