

- A block distributes pressure evenly, allows you more control
- Spares your fingers and comfortable to use
- Portable, virtually limitless applications
- Made of sturdy, durable, high-strength material
- Embossed rubber face allows good adhesion for Stikit™ Sheets

The 3M™ Stikit™ Hand Block is made of a sturdy, durable, high strength material. These blocks have an embossed rubber face which allows good adhesion for Stikit™ Sheet-Rolls and Stikit™ sheets.

More Perfect Surfaces

Our 3M™ Stikit™ Hand Block makes your finishing efforts more effective and more consistent than sanding by hand with a sheet. The Stikit hand block distributes pressure evenly, so you get and maintain a flat surface. A sanding block enables you to apply even pressure, and it prevents your sandpaper from bunching up or slipping. No splinters or finger marks on the surface.

It's easy to grip, ergonomically designed and it allows you to bear down hard without pressure distortion. The Stikit surface holds sandpaper securely in place and the cushioned backing has just enough give to allow the abrasive to work like it should.

Spare your fingers and comfortable to use

Hand block sanding is still necessary in industrial operations despite the preference to do it all with machines

Versatile, Indispensable

Use our Stikit™ Hand Block to abrade flat surfaces — wood, plaster, wallboard, metal — to flush doors, to prepare new and previously painted surfaces. Use the flat edge to chamfer sharp edges, to define intricate angles.

It's constructed of durable, high-strength material so it stands up to time and abuse. Our customers say they've passed this on to the next generation.
