

- Low profile allows for better power transfer from the tool to the work surface
- Soft density pad provides flexibility to reduce loading
- 15 degree tapered edge is ideal for final finishing on flat or contoured surfaces
- 3M™ Stikit™ attachment provides excellent backing support and easy reuse, optimizing disc life
- 5/16-24 external threads are compatible with orbital or random orbital sanders
- New one piece threaded shank for low vibration and improved balance

The 3M™ Stikit™ Low Profile Finishing Disc Pad is a soft density backup pad in 5 or 6-inch diameters for 5- and 6-inch abrasive discs. The soft density foam provides additional conformability and is ideal for final surface finishing applications following leveling and blending process steps.

Stikit™ Attachment System

3M™ Stikit™ products allow you to focus more on the task and less on tooling. 3M Stikit system was designed for convenient disc changes between grades or applications. Stikit™ discs come ready to use with a pressure sensitive adhesive coating on the backside so that attaching them to the disc pad is as simple as pressing on a sticker. The disc can be peeled off of the disc pad just as easily, leaving a clean surface for your next disc. Attachment is quick, easy, and secure during use. Sanding, finishing, and surface conditioning products with the 3M™ Stikit™ attachment and removal system give you an efficient way to work through multi-step finishing processes and can be used again and again for the life of the abrasive.

Disc pads have a vinyl face material which drives 3M™ Stikit™ Discs with Pressure Sensitive Adhesive backings
