

Details

- Foam tape softens hard paint lines in the jamb areas
- Fast, effective method masks and seals all jambs
- Adhesive allows repositioning of tape
- Tape withstands paint booth bake cycles
- Polyurethane foam structure tape conforms to curves and bends

3M™ Soft Edge Foam Masking Tape protects door jambs, hoods or any area of a vehicle that needs to be sealed while being painted. Our foam tape provides a soft edge to prevent hard paint lines. The polyurethane foam structure tape is completely flexible so that it conforms to unique contours and is easily workable. Our tape is available in multiple sizes to meet specific needs.

Softens Paint Lines

3M™ Soft Edge Foam Tape eliminates rework due to unwanted overspray and hard paint lines. Ordinary flat masking tape can leave hard paint lines when used inside jambs, or must be rolled in order to create a soft edge. Because of its unique three-dimensional construction, 3M™ Soft Edge Foam Masking Tape produces a virtually undetectable edge faster than traditional jamb masking techniques. It seals door jambs and other openings to protect them from paint overspray. In addition, dust and other contaminants are contained, preventing them from ruining your paint job. The tape can also be left in place during paint finishing to help reduce compound and polish sling from entering jamb areas.

Made for the Unique Needs of Automotive Body Technicians

Our foam tape makes the job easier while improving end results. If the tape is not perfectly positioned the first time, that's not a problem – specially formulated adhesive allows for removal and repositioning. This masking tape is also designed to withstand paint booth bake cycles, ideal for automotive restoration and paint work.

For jamb masking and other areas that need to be sealed during painting

Rely on premium tapes by 3M if you're looking for quality and efficiency.
