

3M™ Acrylic Foam and Acrylic *Plus* Tapes

Technical Update: Branded Liners

In an effort to help our customers confirm that they are using 3M™ Automotive Attachment Tapes, many of our products now feature 3M branding on the liner. Several competitive products on the market today also take advantage of a red liner, and on occasion, our Technical Service Teams have identified applications where the customer thought they were using 3M products, but were actually being supplied with a non-3M product.

Product Performance

The liner enhancement does not affect the adhesive performance or liner removal from the tape, and does not impact the finished product or PPAP characteristics; current PPAP's remain valid.

Performance tests are run using standard test procedures in 3M laboratories. The values presented are typical and are not to be used for specification purposes. Values depend on test conditions and substrates.

Impacted Products

Please consult the chart below for a complete list of 3M Automotive Tapes and Reclosable Fasteners impacted by this liner change.

3M™ Acrylic Foam Tapes			
4220	5345	5665	EC3516
4220FS	5356	5666	GT6008 (GT6008F, GT6008FS, GT6008L, GT6008TL)
4225	5363F	5745L	GT6012 (GT6012F, GT6012FS, GT6012L)
4257	5366F	5845	GTE6112
5314	5367F	5933	Series PX5000 (PX5005, PX5008, PX5011, PX5015)

Details

- Features two different adhesives – one on each side of the tape for effective bonding
- Liner-side adhesive is designed for adherence to automotive paint systems
- Non-liner-side adhesive delivers excellent adhesion to metal and plastic parts
- Acrylic adhesives are formulated for high adhesive build rates on automotive substrates
- Conformable 1.12 mm acrylic foam core provides excellent stress relaxation under load
- ¼" width is suitable for narrow, exacting applications
- Adhesion promoter recommended for tape-to-part adhesion on plastic parts

3M™ Automotive Acrylic Plus Attachment Tape 06386 features two adhesives, one on each side of a 1.12mm closed-cell acrylic foam core. Liner-side adhesive is formulated for bonding to automotive paint systems. Non liner-side bonds to metals and plastics used in automotive components. Both adhesives deliver excellent initial tack and adhesive build. A ¼" width is suitable for exacting applications.

Two Adhesives for Bonding to Automotive Parts and Paint Systems

Developed specifically for attaching exterior trim and other parts to automotive substrates, our [3M™ Automotive Acrylic Plus Attachment Tape 06386](#) features a 1.12 mm acrylic foam core with two different adhesives — one for each side of the application. Our liner-side adhesive provides very high initial and final adhesion for automotive paint surfaces, including scratch- and mar-resistant paint systems. The non-liner-side adhesive delivers excellent adhesion to plastic and metal surfaces commonly found in automotive trim and other components. The viscoelastic foam core conforms well even to complex geometries. It is engineered for stress relaxation when exposed to high stress loads, and maintains bond-line aesthetics under normal stress loads. The inconspicuous black color of 3M Acrylic Plus Attachment Tape 06386 ensures high satisfaction among consumers. The red, 3M branded liner is silicon-coated on both sides to provide easy one-piece release and efficient tape application. This tape is 1/4" wide, and is recommended for lighter weight applications.

It offers improved adhesion over a variety of conditions

Confidence in Your Purchase

[The 3M branded liner](#) features a subtle 3M logo-marking to provide evidence to the customer that they are receiving the 3M quality they expect from their purchase. The liner makes our tapes easy to identify and difficult to imitate. This proprietary branding technology is designed to help identification of 3M™ Acrylic Foam Tapes.

3M recommends the use of 3M™ Automotive Adhesion Promoter 06396 for tape-to-part adhesion with 3M™ Automotive Acrylic Plus Attachment Tape 06386 on all plastic parts such as RIM, TPO, PPO, PP and PC.

Recommended Applications

- Lightweight body side moldings
- Wheel flares
- Door edge moldings
- Interior trim panels
- Badges, nameplates and emblems

Better Science for Better Adhesion from 3M

Since 1925 when one of our lab assistants invented masking tape, 3M has been applying science to life — developing adhesive products and technologies that help entire industries and individual businesses worldwide. The work that began with a single 3M engineer now spans decades and generations — and all of it goes into each of our products developed for automotive OEM, like 3M™ Automotive Acrylic Plus Attachment Tape 06386.

Rely on [premium tapes](#) by 3M if you're looking for quality and efficiency.
