

- Allows quick and easy disc attachment and removal for multi-step processing
- Options available for right angle grinders and random orbital sanders
- Choose from solid or foam surfaces for custom sanding and grinding control
- Available with or without built-in shanks

3M™ Disc Pad Holders allow you to quickly and easily change Scotch-Brite™ abrasive discs during multi-step projects. Available in a range of sizes, foam densities and attachment options, so you can find the perfect holders for your grinding and sanding projects.

3M™ Disc Pad Holders have a center hole with internal threads—choose the thread size that matches the external thread size of your right angle grinder. T-shaped hooks securely hold a surface conditioning disc and provide quick and easy disc attachment, removal, and re-attachment. The hook-and-loop feature enables the disc to be used and re-used for the extent of the abrasive life. Discs are sold separately.

Our Scotch-Brite™ surface conditioning discs and light grinding/blending products (sold separately) deburr, clean, blend, and finish a wide variety of materials. Using surface conditioning products with a 3M disc pad holder generates finishes suitable for paint.
