

- Prep E-coated panels quickly and evenly
- Scuffs fast without leveling
- Perforations allow for easy converting to 4-3/4 in x 6 in pads
- Aluminum Oxide mineral is durable for sharp cutting action
- Provides optimum primer prep adhesion

We designed the Scotch-Brite™ Primer Prep Scuff to help prep paint areas. It's the first pad in a three-part Scuffing System. When used together, this Scuffing System helps achieve optimum paint adhesion.

Our Scotch-Brite™ Primer Prep Scuff is a non-woven abrasive that comes in a 4-3/4 in x 15 ft roll with perforations for 4-3/4 in x 6 in pads that allow for easy "downsizing." The most aggressive of the [3-part scuff pad system](#) (PDF, 917 Kb), the Primer Prep Scuff is used to scuff prior to primer for proper mechanical adhesion. The aluminum oxide mineral offers an aggressive and clean cut. Our unique non-woven web is the secret to superior performance. It binds together synthetic fibers and abrasive particles to create a conformable, three-dimensional material. Its open structure reduces the risk of warping or discoloring the part, resists loading, improves finish and prolongs the product's life.

When it comes to quality abrasives, grinding & sanding, 3M is the brand you can depend on.
