## WHAT THE "L"?

### WATERPROOF BREATHABLE FABRICS - TECHNOLOGY & TERMINOLOGY

#### SOLID RATINGS

When you see features like 10K/10K noted on a piece of outerwear, we're not talking about social media followers but instead the waterproof breathable performance of the garment. The first number represents how much pressure is required to force water through the membrane, the higher the better. The second number represents how much moisture the membrane can transport away from your skin to be evaporated, the higher the better.

#### WATERPROOF RATINGS

- 1K:** Rain resistant however briefly. Common rating for a garment with only a DWR coating.
- 5K:** Can be called rainproof, but will not perform in extended periods of time or heavy downpours
- 10-15K:** Will stand up to serious extended rain and heavy sleet/snow
- 20K+:** Monsoon-ready

#### BREATHABLE RATINGS

- 5-10K:** Comfortable for mild activity
- 10-15K:** Comfortable for most activity
- 15-20K:** Extended physical activity

**When you see 2L, 2.5L and 3L called out as a feature, here's what it means...**

**2L**

2 layered construction where a waterproof breathable membrane is laminated to the backside (interior-facing) of the shell fabric.

**2.5L**

2.5L = 2 layered construction as above plus a printed layer on the backside (the next-to-skin, interior-facing) of the fabric for the wearer's comfort.

**3L**

3 layered construction where the waterproof breathable membrane layer is laminated between the shell fabric and backer fabric. The backer fabric protects the membrane from wear and tear. This creates a more durable garment with lasting waterproof properties.

**DWR = DURABLE WATER REPELLENT COATING**

This polymer spray is applied to the outer layer of the garment. The polymer bonds to the fabric and causes water to bead up and roll off. Suitable for very light rain or dry snow. DWR may be applied to 2L, 2.5L and 3L garments for a higher level of water repellency.

**SEAM TAPING**

In combination with the laminated fabric construction noted above, you will also see different taping methods called out. Seam taping is exactly what it sounds like, waterproof tape is applied over the construction seams to create a waterproof seal.

**TYPES OF TAPING:**

**Critically Taped:** Taping applied to seams with the highest exposure to rain like the shoulders, neckline and armhole.

**Fully Taped:** All seams are taped. Standard construction for garments with high waterproof ratings. Essential for garments designed for bad weather conditions.

**THE GATEKEEPER**

How does this keep you dry and comfortable? Like a gatekeeper, waterproof breathable membranes block water molecules (rain) from passing through yet allow water vapor (sweat) to escape.

This keeps you dry from the outside elements and comfortable by allowing your own body heat to transport vapor away from your skin through the membrane to be evaporated into the air.

**BLOOD-BORNE PATHOGEN RESISTANT**

In addition to preventing water from passing through, our membranes also prevent blood borne pathogens from passing through. Our BBP garments are tested according to ASTM-f-1671.

**COLD-READY RATINGS**

- 1** Designed to keep you warm in cool conditions.
- 2** Designed to keep you warm in moderately cold conditions.
- 3** Designed to keep you warm in cold conditions.
- 4** Designed to keep you warm in very cold conditions.
- 5** Designed to keep you warm in extremely cold conditions.

This scale is subjective and offers a point of comparison between our different outerwear solutions. Your comfort level will vary depending on preference, your other garments, current physical activity and exterior conditions.

## 5.11® ALL TERRAIN LOAD ASSISTANCE SYSTEM TECHNOLOGY

We designed our A.T.L.A.S. Technology (A/T) to provide a more structured supportive and cushioning boot. If you're reading this, chances are you throw on a substantial amount of gear before you start doing work. Agility, stability and durability are essential footwear performance features, and they're reduced by carrying all the gear essential in law enforcement work. We've listened, learned and put our time and attention into a footwear system that enhances your agility, stability and provides a durable platform.

A/T boots feature a high level of built-in structure and layered cushioning to provide an exceptionally supportive boot for you and other end users like you. A new Ortholite® footbed and an axis plate for torsion and stability control help manage the weight. So too does the echo foam/force foam midsole, which enhances rebound with heavy loads.

### KEY A/T Features:

- + Structured upper for support
- + Welded mesh for lightweight performance
- + Robust lacing system with locking ankle eyelet for secure all-day fit
- + Ortholite® footbed
- + Echo Foam high rebound PU and Force Foam lightweight cushioning footbed
- + 5.11 A.T.L.A.S. Technology Support Plate torsion board for stability
- + Aggressively treaded outsole with high-traction compound

### 5.11® A/T TRAINER

Ortholite®

Get your physical training off on the right foot. All the features of the All Terrain Load Assistance System (A.T.L.A.S.) are available in a shoe designed to help you undergo every kind of workout punishment you can stand. And some you can't.

The 5.11 A/T Trainer adds comfort and substantially increased agility, flexibility, and durability to your cross training, functional fitness and heavy workouts.

- + High abrasion mesh with welded support for structure
- + TPU toe for durability
- + A.T.L.A.S. Technology Echo Lite high rebound EVA/outsole
- + Compatible with A.T.L.A.S. Technology Support Plate

### 5.11® A/T MID

Ortholite®

This is the 5.11 A/T Mid. That's mid-height, not mid-night, though it will find favor on that shift to be sure. Featuring 3D molded TPR toe and heel protection, a welded/mesh upper, and high performance, high traction outsole, the All Terrain Load Assistance System (A.T.L.A.S.) will mitigate the rigors of a heavy load bearing job (and in no small way, either). The mids were developed to work with your "work weight". Work longer, with less stress even when you're loaded down.

- + Welded mesh upper, 3D molded TPR toe and heel protection
- + ASTM slip and oil resistant high traction outsole
- + 5.11 A.T.L.A.S. Technology Support Plate
- + Echo Foam high rebound/energy return PU and Force Foam lightweight PU impact cushioning

### LOAD READY HAUL PACK

35L

Constructed from durable 1050D Nylon and featuring a 1000D polyester base with waterproof TPU coating, the Load Ready Haul Pack is an ultra heavy duty convertible haul-all. Load what you need then carry it in either backpack or tote/duffel configuration as is most expeditious for your circumstances.

The Haul Pack sorts, separates, and segregates with the use of side slip pockets (with upper compression strap), front and rear pockets with hook and loop closures, and an internal zippered mesh pocket. The external lash loops with double layered webbing will get you sorted for accessory attachment too. For open access, roll up and store the top lid with toggle/loop, or roll it back down and secure it to protect your cargo from the elements or prying eyes.

The pack is protected on the bottom by a dual layer, internal and external, waterproof panel, and you don't need to worry about your cargo splitting out the seams either. The Load Ready Haul Pack is sewn with extra heavy duty thread and reinforced with extra bartacks.
