9	11530	Eyebolt	4				

*During assembly make sure the mounting holes in the legs for #14 are positioned so the holes are facing outward away from each other and not upwards/vertical. When #14 is attached to the leg assembly the rail supports should then face upwards to accept the top rail. If the mounting holes for #14 do not align properly please flip the legs around until the proper position is achieved. Please note the rail supports will not be a perfect 90 degree angle, as the legs are moved into different positions the degree of the rail supports will change.
