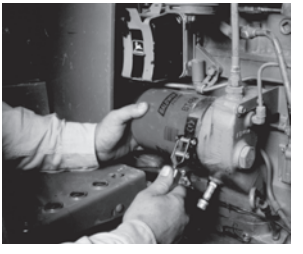
BALDWIN FILTERS®

FARM EQUIPMENT

Maintenance & Filter Guide

2016-2018 Edition

Baldwin Filters is Committed To Quality and Coverage



Today there is more pressure on farmers and livestock producers to be cost effective. It takes additional planning and conservation of financial resources just to stay in business. Baldwin Filters is committed to maintaining costs while still providing quality filters.

Baldwin has been producing filters for engine-powered agricultural equipment for over 75 years and has the coverage you need for your equipment. Baldwin filters provide the extra, heavy-duty protection required on today's high-tech ag equipment. It is important to maximize your equipment investment and to protect your equipment with Baldwin filters.

An integral part of protecting your equipment is maintenance, and maintenance is impossible without filters. Understanding the types of filtration and what filtration does for your equipment system can be an important first step in providing better maintenance. By following the suggestions and practices explained in the articles in the maintenance section of this book, you should be able to extend engine life, maximize horsepower, save fuel and obtain above average service from your equipment.

Baldwin Filters is committed to providing the filtration coverage you need for all your engine-powered equipment.

SUFFIXES

Multiple letter suffixes may need to be read as single letters. Suffixes often indicate the maker of the filter housing in which the element fits. When the suffix is not used for this purpose, it most often indicates the following:

-1 Specification Change

-2 Double Length or Air Element with 2 Inch Pleats

(2), (3), (4) Number of Elements in a Kit

-3, -5, -10, -25, -30 Nominal Micron Retention

-A Closed End, Conversion Kit, Aluminum, Version # *

-AF Normally on Air Filters

-AL Can Be Used with Fluids Containing Alcohol

-B By-Pass Lube, Boxed, Version # *

-BSP Britsh Standard Pipe

-CPE Cotton Sock for Use with Non-Acid Fluids Flowing at Moderate Temperatures

-CS Water Absorbent Media

-D Drain, Direct Mount *

-DL Double Length

How Truck Applications Are Arranged

Alphabetically by Manufacturer
All trucks, truck engines and related equipment are listed in this section alphabetically by manufacturer. Names which are initials only are listed as if the initials spelled a word. Therefore, M & W is listed under "MW" at the end of the M's. Wherever the possibility of confusion may exist, a reference to the correct listing will be found in this section.

Alphabetically by Vehicle Type
Within each manufacturer, all vehicle types are arranged alphabetically.

Alphabetically by Model Name
Within each vehicle type, all models are arranged alphabetically. If the model has numbers as all or part of the model name, it will be listed numerically after the alphabetically listed models. Light-duty trucks are listed in the Automotive Section of the Baldwin Applications Catalog, Form 124.

By Engine Make
Under each model, the engines are listed according to make and then size, from the smallest to the largest engines. If you don't know the model of the truck, refer to the engine listing in this section.

Optional Filters
Optional filters often appear at the beginning of the list ahead of the first model listing. Refer to the Cross-Reference Section of this catalog.

NUMBERS IN BRACKETS OR PARENTHESES

The number in square brackets in front of our bold face part number shows the quantity for a single change per truck. If the number is in parentheses at the close of our part number, that is the quantity included in the package and sold as a unit.

A number in parentheses after the description is the Original Equipment number for that filter. Verify that the OE number is the same on your truck before use. If the OE number is different on your truck, refer to the Cross-Reference Section of this catalog.

MEANING OF SYMBOLS USED IN THIS SECTION

When more than one Baldwin number can be used, the numbers are listed separated by a comma (BF957,-D).

When there are variations of a Baldwin product, a plus sign (+) (BF957+) indicates you can find these variations in the Baldwin Product Guide (Form 562)

An asterisk (*) indicates an extra-long life version is available.

Numbers representing screens or other permanent filters (not replaced by Baldwin) are marked CLN&R* (Clean and Reuse) if they have been reported as capable of being cleaned and reused. Baldwin cannot be responsible for such reuse.

IMPORTANT NOTICE

All product applications and specifications in this catalog are based on the latest authoritative information available at the time of publication. However, there are many filter options offered by equipment manufacturers during a given model year making it impossible to be absolutely certain that all equipment of the same make, model and year will use the same filter. For this reason, we cannot be responsible for misapplications.

Original equipment manufacturer's tradenames or trademarks are for identification purposes only. There is no affiliation, sponsorship or connection with the original equipment parts or manufacturer.

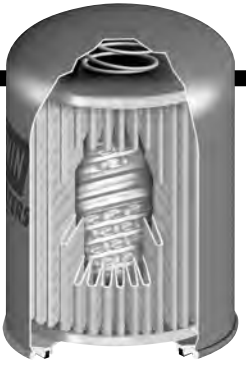
FILTER CONSTRUCTION



Not all filters have the same parts inside, but this page shows components of a typical spin-on (starting on the inside and working out).

CENTERTUBE

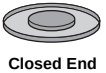
Spiral wound, louvered centertube forms the center of most non-air filters. The filtering media is placed around this centertube. On larger filters, a reinforcement or centering guide is sometimes added.

PLEATED FILTERING MEDIA

Used in most "surface type" filters where contaminants are trapped on the surface. The greater the surface, the greater the capacity.

Baldwin uses more than sixty different media, depending on the application.

ELEMENT END CAPS



Closed End

Open End

End caps (of metal, plastisol or paper) are bonded to the filtering media to prevent unfiltered liquid from by-passing (going around instead of through) the media. Some elements are constructed with two open ends. Others have one open and one closed end.

COMPRESSION SPRING

Holds element in place to make sure the element seal remains intact.

BY-PASS VALVES

All full-flow lube systems require a by-pass (relief) valve to permit oil to flow to the bearings even when cold oil is too thick to flow through the filter. The valve also opens when the filter becomes plugged. If not located in the engine system, there must be a by-pass valve in the filter. (It can be both places, providing the one in the spin-on opens at the same or higher pressure than the one in the system.)

ANTI-DRAINBACK VALVE

The position of the installed filter determines the need for this valve in a filter. This keeps the oil from draining from a filter when the engine is shut off. (If the filter hangs downward from the base or "dome end down," this valve is not needed, but would cause no problems if included.)

BASEPLATE AND SEAMING COVER ASSEMBLY

The baseplate is attached to the seaming cover and the seaming cover is attached to the can. Be sure the gasket on the baseplate seals with mounting surface when you install a spin-on filter.

SPIN-ON FILTER CAN

You change spin-on filters quickly because there is no housing to clean. The entire unit is changed each time.

How Farm Equipment Applications Are Arranged

Alphabetically by Manufacturer
All farm equipment is listed in this section alphabetically by manufacturer. Names which are initials only are listed as if the initials spelled a word. Therefore, M & W is listed under "MW" at the end of the M's. Wherever the possibility of confusion may exist, a reference to the correct listing will be found in this section.

Alphabetically by Vehicle Type
Within each manufacturer, all vehicle types are arranged alphabetically.

Alphabetically by Model Name
Within each vehicle type, all models are arranged alphabetically. If the model has numbers as all or part of the model name, it will be listed numerically after the alphabetically listed models.

By Engine Make
Under each model, the engines are listed according to make and then size, from the smallest to the largest engines. If you don't know the model of the equipment, refer to the engine listing in this section.

Optional Filters
Optional filters often appear at the beginning of the list ahead of the first model listing. Refer to the Cross-Reference Section of this catalog.

NUMBERS IN BRACKETS OR PARENTHESES

The number in square brackets in front of our bold face part number shows the quantity for a single change per piece of equipment. If the number is in parentheses at the close of our part number, that is the quantity included in the package and sold as a unit.

A number in parentheses after the description is the Original Equipment number for that filter. Verify that the OE number is the same on your piece of equipment before use. If the OE number is different on your equipment, refer to the Cross-Reference Section of this catalog.

MEANING OF SYMBOLS USED IN THIS SECTION

When more than one Baldwin number can be used, the numbers are listed separated by a comma (BF957,-D).

When there are variations of a Baldwin product, a plus sign (+) (BF957+) indicates you can find these variations in the Baldwin Product Guide (Form 562)

An asterisk (*) indicates an extra-long life version is available.

Numbers representing screens or other permanent filters (not replaced by Baldwin) are marked CLN&R* (Clean and Reuse) if they have been reported as capable of being cleaned and reused. Baldwin cannot be responsible for such reuse.

IMPORTANT NOTICE

All product applications and specifications in this catalog are based on the latest authoritative information available at the time of publication. However, there are many filter options offered by equipment manufacturers during a given model year making it impossible to be absolutely certain that all equipment of the same make, model and year will use the same filter. For this reason, we cannot be responsible for misapplications.

Original equipment manufacturer's tradenames or trademarks are for identification purposes only. There is no affiliation, sponsorship or connection with the original equipment parts or manufacturer.
