NEW HOLLAND
Tractors (cont'd)

TT65 w/Iveco 3 Cyl. Diesel Eng. (Cont'd)

Radial Seal I. Air (82981153).....	**RS3545**

70-86, 72-86 w/Iveco 8045.06 Eng.

Lube (1909101).....	**BT347**
Fuel (1930010).....	**BF587-D** +

TD70 Straddle Mount w/Iveco 8035 Series Engs.

Some Lube (Tier 2) (47135703).	**B7219**
Hyd. Lift (5149813).....	**BT470**
Fuel (Tier 2 TTF) (47135706).....	**[2] BF5587-D**
Fuel/Water Separator (Tier 2) (1930581).....	**BF1361**
Radial Seal O. Air (47137832)...	**RS3544**
Radial Seal I. Air (5080445).....	**RS3545**

TD70D

Lube (Exc. Tier 2) (47135703)....	**B7219**
Fuel (1930581).....	**BF1361**
Fuel/Water Separator (47135706).....	**[2] BF5587-D**
Radial Seal O. Air (47137832)...	**RS3544**
Radial Seal O. Air (47132343)...	**RS3544**
Radial Seal I. Air (47132346).....	**RS3545**

TK70FA, TK70VA w/Iveco 2.9L Eng.

Lube (47135703).....	**B7219**
Hyd. Lift (1909130).....	**BT470**
Steering (1909143).....	**PT9477**
Fuel (47135706).....	**BF5587-D**
Axial Seal O. Air (1930536).....	**PA3859**
Axial Seal I. Air (1930537).....	**PA2791**
Radial Seal O. Air (47135972)...	**RS3542**
Radial Seal I. Air (47135975).....	**RS3543**

TL70, TL80 w/Iveco 3.6L, 3.9L Engs.

Lube (1909102).....	**[2] BT348**
Hyd. Tank (1909143).....	**PT9477**
24x24 Trans. (1930986).....	**[2] BT8920**
Trans. (Power Shuttle) (5178100).....	**PT8895-MPG**
Fuel (1930010).....	**BF587-D** +
Fuel/Water Separator (1930581).....	**BF1361**
Axial Seal O. Air (1930536).....	**PA3859**
Axial Seal I. Air (1930537).....	**PA2791**
Radial Seal O. Air (1930587).....	**RS3542**
Radial Seal I. Air (1930588).....	**RS3543**
Cab Air (5196842).....	**[2] PA5710**

NEW HOLLAND
Tractors (cont'd)

TN70, TN70D,TN70S

Lube (1931018).....	**B7219**
Hyd. (5174044).....	**BT8899**
Fuel (1930010).....	**BF587-D** +
Radial Seal O. Air (1930587).....	**RS3542**

Check Original Equipment Numbers In Parentheses.

How Manufacturers' Cross-Reference Is Arranged

This Cross-Reference Section contains original equipment and competitive manufacturers' filter numbers arranged by MANUFACTURER.

HOW TO USE THE MANUFACTURERS' CROSS-REFERENCE

FIRST, find the manufacturer desired. These are listed alphabetically.

SECOND, find the desired number. Beginning zeroes, dashes, slashes, decimals, etc., are ignored in sorting. Numbers are sorted ahead of letters. (Fractions are sorted as whole numbers. For example, 1/4 is written as 1/4 and sorted as 14.)

THIRD, Baldwin numbers are listed in bold face. Baldwin numbers separated by a comma are interchangeable and mean that either can be used. A plus sign (+) indicates other variations of the filter are shown in the Product Guide (Form 562)

IMPORTANT NOTICE

All cross-references in this catalog are based on the latest authoritative information available at time of publication. However, equipment manufacturers often change component suppliers without notice while continuing to use the same filter number. This change could result in a non-critical dimension becoming critical. Other filter manufacturers may use one filter to replace two of ours. Thus, when crossing from a non-original equipment filter number, a problem could develop. If a filter doesn't seal when installed, it should not be used. We cannot be responsible for misapplications.

MEANING OF SYMBOLS USED IN THIS SECTION

[G] Boxed G = Gasket
Gaskets are listed in the same way as filters. The boxed G points out that this is a gasket.

[H] Boxed H = Housing
The boxed H represents a base or a housing. If Baldwin has no exact replacement, the filter used is shown rather than another base or housing number.

+ Plus Sign = Variation
See the Baldwin Product Guide (Form 562)

CLN&R* = Clean and Reuse
Numbers representing screens or other permanent filters (not replaced by Baldwin) are marked CLN&R* if they have been reported as capable of being cleaned and reused. Baldwin cannot be responsible for such reuse.

Not U.L. App. = Not U.L. Approved
Filters used in high fire-risk applications carry U.L. approval. Ours are equivalent size but not fireproof.

Preventive Maintenance Can Help You Gain Profits

U.S. farmers have improved productivity more than any other industry in our country and more than any other farmer in the world. To be successful, they put in longer hours than just about any other profession.

But, in today's farm environment, long hours aren't enough to guarantee a successful farming operation. Farmers must be good business managers, who strive to maximize return on investment, profit and cash flow.

The good farm manager realizes the one chore he can't afford to neglect is preventive maintenance. A good P.M. (Preventive Maintenance) program will keep his machinery working longer.

A study of the performance of fifty farm tractors conducted by the University of Kansas Agricultural Experiment Station shows that the average farm tractor operates at less than 90% efficiency and uses almost 15% more fuel than necessary.

How do the "major fleet operators" get more life out of their engines? Most fleets strictly follow a maintenance schedule for preventive maintenance.

They also have a maintenance superintendent and mechanics for the service work; a farmer has to do it all. With specialized manpower, it's no surprise that fleets are able to get more life from an engine than someone trying to do it all.

Neglect is much too costly these days. The farmer knows that a well-equipped tractor that ties up a significant amount of his capital must efficiently be used for a number of years for return on his investment. At that price, he has to carefully evaluate his maintenance program.

A few years back he could buy a new tractor for the price of rebuilding or overhauling one. Now, in some cases, he can sell used equipment in top condition for its original price or more.

Drivers of farm equipment must become good operators. A good operator studies the Operator's Manual and is familiar with the cautions in it. He understands the operation of controls and he watches gauges. Equipment operation at the correct speed in the right gear for the job is his concern. He regularly services the equipment with the specified oil, grease, fuel and coolant. He is alert for sounds or action which might indicate faulty functioning of any part. In addition to operating the equipment, a good operator services, adjusts and repairs it.

WHAT IS P.M.?

Preventive maintenance is a systematic schedule of checking and maintenance to detect and correct failure symptoms in early stages — before they become major.

There are five vital areas to consider in a preventive maintenance schedule - lubricating system, fuel system, air intake system, cooling system and hydraulic system. Each system has a vital job to perform in getting the most power and longest life from your equipment. You will find articles in this book dealing with each of these systems.

Effective preventive maintenance starts with good record keeping. Records will tell you how much was spent for maintenance and repair in a year. This can be divided into a cost per acre or cost per hour of operation to give you a budget figure when setting up a cash flow schedule.

The older the machine, the more maintenance should be budgeted. One farmer says he budgets 10% of the list price of a new machine for third-year maintenance. Through proper use of your records, you will be able to come up with a figure that is right for your operation.

Records are not only for budgeting. If you see a part that consistently needs attention after a certain number of hours, replace that part before it breaks down in the field. Your records may show how you can put off major overhauls by more frequent oil filter changes and more care in servicing air cleaners.

Good records show when you last performed scheduled maintenance on a piece of machinery and when you must next service that machinery.

Good records will help you service equipment for dependability and prepare you for emergency repairs. You will better understand machine wear and learn to project overhauls and replacement costs into cash flow.

In addition, you can sell your used equipment for more when your maintenance records are up-to-date and show regular maintenance has been performed on schedule.

HOW CAN I SAVE MONEY BY PRACTICING GOOD P.M.?

You may find the turbo-charged engine in your tractor that previously needed an overhaul every three years has now lasted five years.

By practicing good preventive maintenance and using your records, you will be able to determine the actual savings in your own operation.

HOW TO START A MAINTENANCE SCHEDULE

First, take your owner's manual and study it. Write out a schedule of what the manufacturer recommends.

Allow space on your schedule to record weekly, semi-monthly, monthly, semi-annual and annual maintenance performed. Space should be provided for recording dates as well as the number of hours on the meter when each function was performed. Daily or ten-hour servicing should be on the schedule. This daily maintenance should be so second nature that it becomes a part of your natural routine.

Make notes on the location of bearings, lubricants to use and adjustments to be made. Note how this specific machine differs from the machine it replaces or other equipment with which you are familiar.

Schedule the start of your off-season maintenance early enough to be completely ready when it is time to use that equipment in the field. Proper preparation will mean less work and better protection. Work on machines during the off-season so they work during the season.

By having all of your schedules written in the same format and stored in a single binder, or on separate charts mounted on the same wall, you save time searching for information. You also make certain all work called for is performed.

Good preventive maintenance will reduce breakdowns, save on operating costs, enable your equipment to work longer and allow you to operate more safely. You'll save both time and money.

Remember, the fellow who said, "If it ain't broke - don't fix it!" really meant maintain it.

FOLLOW OWNER'S MANUAL MAINTENANCE SCHEDULES . . .

When it's time to change filters, Baldwin has over 6,500 different numbers available for lube, air, fuel, coolant, hydraulic, transmission and many other applications.

Winter Farm Equipment Maintenance

Farm equipment and its ability to do what you want it to, when you want it to, is integral to the efficiency and sometimes, the very survival of a commercial farm enterprise. Yet, how often does one see farm equipment left outside for the winter where it is expected to perform again as good as new in the spring? Yes, this policy may work for a year or so but eventually that neglected piece of equipment is going to cost you in terms of performance and production and perhaps even be the cause of a workplace accident. There are steps you can take during the winter months to help prevent costly breakdowns that will also save you money.

PAPERWORK

Before you even think of getting your hands dirty or calling in a mechanic to do maintenance you would be well advised to get the paperwork straight. Make up an equipment service program and keep records of services and work done as recommended in the service handbook for each piece of your farm equipment. The Virginia Cooperative Extension, says, “A Midwest study showed that many farmers could reduce machinery repair costs 25 percent by improving routine maintenance procedures.” The first step to saving those dollars is the ability to identify what needs doing and when. Make easy to read charts. Those very records could also mean extra dollars when it is time to trade the equipment in or sell it.

STORAGE

Farm equipment that is left outside will deteriorate faster than if it is stored inside. Clean your equipment off, dry it, lubricate it, and get it inside. Keeping moisture away from bearings and important parts will help prevent rust. Also, having the ability to use either or both of high pressure air and high pressure water are valuable tools; avoid using water on seals containing bearings. Be stringent with your cleaning, if you do not remove crop residues from the engine compartments of combines for instance, then you are risking a fire when you next take it out to the fields. Ensure that you pay special attention to cutter blades and cylinder pans on forage harvesters and the knotters on balers; treat any bare metal on all your farm equipment with grease or use a rust preventative solvent spray.

If you cannot get all of your farm equipment inside then select the most expensive equipment first. Again, this is a dollar issue; equipment that is in a better condition should achieve a higher trade-in value or sale price.

WORKSHOPS

Spend some money on a well equipped, suitable sized and warm

shop to perform your maintenance tasks. Make sure that your shop can accommodate the largest piece of your farm equipment and that it has suitable doors to get the equipment in and out of your shop easily. Also stock up on supplies and spares that you are most likely to use. If you are building or fitting out a shop from scratch, designate a space in the center of your shop for the largest piece of your equipment; allocate a five foot perimeter around that for a service area, and a further four foot perimeter around that workspace to allow for workbenches. Ensure that you have adequate insulation, lighting, heating, and most importantly, ventilation.

OIL

You will be changing your oil as per your service handbook and disposing of it in an environmentally correct way, but did you know that, like a blood test can pick up a problem in your health, an oil analysis can perhaps point to a problem in your equipment that will manifest itself when you can least afford it? It is best to take your oil sample when it is hot and thoroughly mixed. So, take appropriate precautions to prevent being burned. Your local machinery dealer should be able to arrange the analysis for you or point you in the right direction to get one. The analysis will establish a base for normal conditions and can alert you when abnormal wear or contamination occurs. Furthermore, no two pieces of equipment are exactly the same and the oil analysis may show that you are changing the oil too often, or indeed, not often enough. Either way this information could save you money.

ENGINES

Engines be they diesel or gas are generally at their most powerful and fuel efficient when they are tuned optimally. Your farm machinery dealer will have modern equipment to test the efficiency of your engines and tune them appropriately. The cost of this should be recoverable from fuel economies and the peak performance you reap in return. Also, try not to be tempted to alter or modify your engines in the quest for better performance. The likelihood is that your engine will not have been designed for such modifications and you could be asking for trouble somewhere down the line. Basically, “if it isn’t broke, don’t fix it.”

FILTER PERFORMANCE

MICRON RATINGS

Micron Ratings are arbitrary values assigned to filters or media. Although a "micron" is a length (1 millionth of a meter), a "micron rating" is not actually a measured value. The micron rating for a filter quotes a particle size without establishing the filter's efficiency at removing that size of particle. A window screen will remove some 5 micron particles, but it will not be very efficient. Since a micron rating cannot be verified, filter manufacturers are safe in assigning any number they want. We do not recommend comparing filters based on micron ratings.

To compare filters, the filter industry has established standardized tests for measuring performance. These tests also include **Life and Efficiency Tests** (SAE HS806, J726 and J905) and **Beta Ratio Tests** (ISO 4548-12 and ISO 16889). These standardized tests, along with the meticulous recording of test conditions, insure that filter manufacturers compare "apples to apples."

LIFE AND EFFICIENCY TESTS

Life and Efficiency Tests are the most accurate and objective way to compare the performance of filters. A life and efficiency test measures the filter's ability to remove a standardized contaminant from a standardized fluid that is flowing at a constant rate and constant temperature. The test continues until the contamination increases the differential pressure drop across the filter to a specific, predetermined level. The test results will include a Time Weighted Efficiency (%) and a Capacity (grams).

BETA RATIO TESTS

Beta Ratio Tests measure a filter's ability to remove particles of a given size. In other words, the tests measure the filter's efficiencies at specific particle sizes. The beta ratio test actually counts the particles in the fluid before the filter and after the filter. This test is generally done on hydraulic filters.

SUMMARY

In summary, equipment owners should consider all of the factors when choosing filters for their applications. You should try to closely follow cross-reference and specific application recommendations. When comparing filters, you should note the questionable nature of micron ratings and try to get standardized test information.

BETA RATIO

$$\beta = \frac{\text{particles upstream}}{\text{particles downstream}} = \frac{20{,}000 \text{ particles}}{1{,}000 \text{ particles}} = 20$$

Using the following formula and following the examples, you can convert a beta ratio to an efficiency:

$$\frac{\beta - 1}{\beta} \times 100 = \text{Efficiency (\%)} = \frac{20 - 1}{20} \times 100 = 95\%$$

Examples: ß10 = 2: (2-1) ÷ 2 x 100 = 50.0% efficient at 10 μm

ß15 = 75: (75-1) ÷ 75 x 100 = 98.7% efficient at 15 μm

Hydraulic And Transmission Systems Care

Hydraulic systems utilize fluid to control a variety of functions. On one machine, you might have a single system doing several things. On another, one system may do just one thing. On your biggest machine, you might have several systems with each system doing a portion of each job.

Some of the systems that use hydraulic fluid include brakes, steering, transmission, torque converter, remote cylinders, implement control, hydraulic motors and others.

In addition to control, the fluid acts as a lubricant and coolant to the system.

The hydraulic pump circulates the same oil thousands of times — whether clean or dirty. When the oil is dirty, it is like rubbing the pump continuously with emery cloth.

Without realizing this, some operators change engine oil and filters religiously, but seldom or never change hydraulic oils. Hydraulic fluid and filters must be changed as often as the service manual says you should — even if you don't think it needs it that often! Neglect is too costly.

Oil in the hydraulic or transmission system is subject to some of the same contamination as engine lube oil.

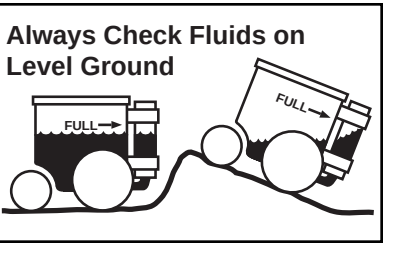
Condensation causes water to form in the reservoir. This mixes with the oil under pressure and results in rusty parts and a corroded pump. If the fluid is tan or gray, it needs to be drained because you have a water emulsion problem. Water in the oil will also result in short filter life.

CHECKING THE SYSTEM

Some manufacturers say to check the hydraulic fluid level every 10 hours of operation. Others say weekly or every 50 hours and still others say at least every 250 hours.

If you check the hydraulic fluid every time you check the engine oil, you won't be likely to forget. Most systems either have a sight glass in the reservoir or a dipstick.

When the oil level isn't up to the sight glass or the proper level on the dipstick, fill the reservoir with the proper fluid. Don't over fill as this creates more pressure which could damage seals.



DON'T INVITE DIRT

COVER THOSE COUPLINGS!

If the system is regularly low on oil, look for leaks or cracks in the system. Hold a piece of cardboard near where you suspect a leak. Hydraulic fluid under pressure is dangerous, it will pierce the skin. Protection is also needed for your eyes.

Pinched or dented lines can cause oil foaming, overheating and loss of hydraulic power.

If you find it necessary to replace hoses or tubes, wash the new lines inside and out with clean hydraulic or transmission fluid of the type regularly used in the system. (Solvents are not suitable and could cause problems.)

When you connect or tighten hose fittings, use two wrenches to avoid twisting lines. Tighten only until snug.

When inspecting hoses, look for cracking, splitting, pinhole leaks, rubbing, heat damage, twisting or improper routing. Hydraulic fluid will foam if there is air trapped inside. Air leaks will cause the fluid to oxidize rapidly, forming harmful gum and sludge.

Noisy hydraulic systems usually have air in them. Bleed air from cylinders by running them at least four times from fully retracted to fully extended position.

Whenever a remote cylinder is plugged, trapped air must be bled to prevent sluggish action of the cylinder. Noise in the hydraulic system may also be caused by inadequate oil flow. A noisy or hot hydraulic pump is usually not getting enough oil.

SELECTING HYDRAULIC OIL

Follow the equipment manufacturer's recommendation in selecting hydraulic fluid. That is the fluid that meets the needs of the system whether it is a simple cylinder, precision hydraulic pump, or a common reservoir for both hydraulic and transmission systems.

The fluid specified may be the standard API service classification of SM. It may be a special antiwear hydraulic oil. It may be a four-way oil such as Allis Chalmers A-26 Fluid, Case TCH Fluid, Ford M2C41-A Fluid, IHC Hy-Tran B-6 Fluid or John Deere 303 Special-Purpose Fluid.

Some fluids used as transmission-hydraulic fluids, which also operate wet brake or wet clutch systems, require additives to control chatter. All of the four-way oils listed in the previous paragraph have the following characteristics in common:

1. High oxidation stability for long life protection.
2. Low pour point for low temperature service and cold starting.
3. High viscosity index for best viscosity under various operating temperatures.

4. Extreme pressure additives for increased load-carrying and wear protection under heavy or shock loads.
5. Foam suppressors, rust and corrosion inhibitors.
6. Compatibility with all types of seals.

Store enough of each kind of oil needed so you won't be tempted to substitute another oil. The right oil will do the intended job, but the wrong oil can be very costly.

CHANGING FLUID

On new equipment, maintenance managers recommend a filter and fluid change after the first 50-hour break-in period. To insure best long-term performance, such a change is mandatory. In fact, a change after 15 hours and again after 50 hours would be better. This gives time for "scrubbing" the system.

Although there are minor variations in changing the oil and filters in various systems, here are some basics applicable to all or nearly all:

1. Warm the oil to be changed. By operating the equipment long enough to warm the oil, the oil will flow more freely, carrying the contaminants with it.
2. Park on a level area. An incline causes the oil to remain in a portion of the system along with some of the contaminants.
3. Lower the lift arms; retract the external cylinders.
4. Shut off the engine.
5. Drain and discard the oil according to local, state and federal regulations. (If flushing is indicated, see flushing instructions on next page.)
6. Clean the area surrounding the filter cover, then remove the filter cover.
7. Remove the old filter and insert the new one. (If removing a spin-on instead of an element type, lightly oil the gasket before installing on the base.) If there is an intake strainer on the reservoir, it should be checked and cleaned regularly to prevent possible pump cavitation.
8. Fill the reservoir with the correct fluid to the right level. Use only clean oil, funnels and containers. Replace the filler cap.
9. Start the engine and warm up the hydraulic system. Operate the equipment through its working cycles several times to bleed air from the system. When changing the transmission fluid, be sure to shift into various gears. Hydraulic and power brakes should be bled in accordance with instructions in the service manual for the equipment.
10. Shut off the engine and check the oil level again. Add oil if needed. Check all connections and filters to make sure there is no leakage or by-passing.

SUMMARY

Cleanliness is most important in servicing hydraulic systems. It doesn't take much dirt to score valves, seize pumps, plug orifices and cause expensive repair jobs.

A well-maintained hydraulic system will give you good service. Neglect will cause problems.

FUEL SYSTEM MAINTENANCE

KNOW WHAT TO EXPECT FROM YOUR DIESEL FUEL

Although emission regulations are becoming increasingly stricter, there are still contaminants in fuel which are within American Society for Testing and Materials (ASTM) and the American Petroleum Institute (API) specifications.

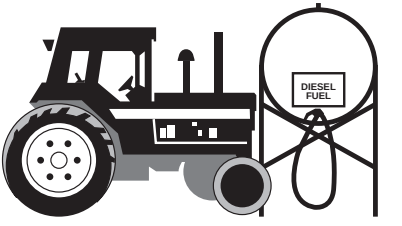
There was a time, not too long ago, when you could assume that the fuel delivered to you was relatively clean. In today's market, neither the owner or operator of farm machinery can take for granted the quality of his fuel.

Fuel contamination, in varying amounts, is a fact of life. Contaminants in your fuel are generally introduced in your fuel storage systems by mixing, transferring and storing of fuel by you, your suppliers or their sources. The responsibility of understanding the effects of these contaminants upon your fuel and how to minimize them, falls squarely on your shoulders.

Your job is to anticipate any problems and act to minimize downtime and eliminate damage due to contaminated fuel. You may ask yourself, what are all of these problems that I now need to be aware of? How do contaminants get into my fuel system?

HEAVIER CRUDES

When oil was at a seemingly endless supply, refiners used only the best crudes. These were called light, sweet crudes. They were rich in



lighter fractions (components or products within crude oil) and were low in sulfur content. Now, much of the world's supply of light, sweet crudes is depleting. What we are left with are heavy, sour crudes. These sour crudes don't have enough of the lighter fractions and are rich in sulfur. Fractions vary from butane (at the light end) to tar (at the heavy end). The middle fractions are where you get your diesel fuel and gasoline.

NEWER REFINING METHODS

Petroleum refining has evolved continuously in response to changing consumer demand for better and different products. The original demand was for kerosene to use as a cheaper and better light source than whale oil. The development of the internal combustion engine led to the production of gasoline and diesel fuels. Next came the airplane, which created a need first for high-octane aviation gasoline, then for jet fuel, a sophisticated form of the original product, kerosene.

With the onset of mass production and World War I, the demand for gasoline-powered vehicles increased dramatically, as did the demand for

gasoline.

With the increased demand for gasoline, new refining methods were needed to make more efficient use out of heavy crudes. In 1913, the "thermal cracking" process was developed, which subjected heavy fuels to both pressure and intense heat, breaking large molecules into smaller ones to produce gasoline and distillate fuels.

Following the Second World War, various refining processes improved gasoline quality and yield and produced higher-quality products. Some of these involved the use of catalysts and/or hydrogen to change molecules and remove sulfur.

"Catalytic cracking", developed in 1937, was used to break up heavier hydrocarbon molecules into lighter hydrocarbon fractions by use of heat and catalysts. This process increased the yield of improved-quality products under much less severe operating conditions than in thermal cracking.

By 1960, the "hydrocracking" process was developed. Hydrocracking combined catalytic cracking and hydrogenation, wherein heavier feedstock are cracked in the presence of hydrogen to produce more desirable products. This process utilized high pressure, high temperature, a catalyst and hydrogen to produce more desirable products.

The refining process has come a long way and continues to look for new ways to meet the ever increasing demands for efficient, higher-quality products.

LOW SULFUR FUELS

In 2000, the Environmental Protection Agency (EPA) proposed tighter regulations for emissions from heavy-duty trucks and buses starting in the year 2007. The EPA also proposed to reduce allowable sulfur levels in diesel fuel by 97% to meet these tighter standards.

Because of the concerns of health effects of certain components of diesel exhaust, the EPA has moved to regulate diesel engine and vehicle emissions more strictly. These emission controls would affect diesel locomotives, light-duty diesel vehicles and marine diesel engines. The EPA also plans to propose standards for diesel engines and fuel used in off-road construction and farm equipment.

Diesel vehicles and engines currently face less stringent emission standards than gasoline engines. This is mainly because passenger vehicles (using gasoline engines) were previously considered the main contributor to mobile source pollution. As emissions from gasoline engines have improved, more attention has been paid to improving emissions from diesel engines.

Because of these new vehicle and engine regulations and proposals, sulfur levels in diesel fuel will need to be significantly lowered. New technologies for emission control are especially sensitive to sulfur, which can corrupt emission control devices.

MIXING FUELS

When you have identified a supplier that sells you consistently clean fuel, you may still find you have a contamination problem. In the early 1950s one engine manufacturer recognized a problem with mixing two clean fuels. Their engine bulletin stated that the mixing of two clean fuels could precipitate undesirable particulate materials. These particulates can be either organic or insoluble particulates. One fuel

would cause particulates to precipitate from the other. They stated that the process can occur even if both fuels are stable prior to mixing. This mixing may have occurred at any point until the fuel is used. This includes the refinery, in any storage tanks or your vehicle tanks. The fact is that most users get fuel from more than one supplier. That supplier may have obtained his fuel from more than one source of stock. Some particulates seem to be unavoidable in the fuel.

CONTAMINANTS IN YOUR FUEL

Fungus and Bacteria are the most widespread contaminants in today's diesel fuels. These fungus and bacteria live in the water and feed on the hydrocarbons found in the fuel. These contaminants are called Hydrocarbon Utilizing Micro-organisms, or Humbugs for short.

A microbial problem is evident when the spores become active and multiply, forming colonies and mats of growth. Colonies will spread through a fuel system wherever moisture or trace amounts of water are present. Bacterial problems are characterized by short filter life.

The fuel filter will have a slime over the entire surface of the media. Draining the fuel system will reduce microbial activity, but it will not eliminate it. The only way to eliminate microbial growth, once it has started in a diesel fuel system, is to treat the system with a biocide.

Precipitates and Particulates are non-combustible materials formed when two incompatible fuels are mixed, or when fuel oxidizes. Tests suggest that fuel can oxidize when an unstable fuel circulates through an engine. Heating and cooling occur when the fuel used for cooling the injectors is returned in large quantities to the tank, causing the oxidation. Asphaltines sometimes can be formed as part of the oxidation process. Some say asphaltines are uncracked or damaged molecules left over from the refining process. Asphaltines are found as an oily, black substance on the surface of your fuel filter media.

Most of the time, these contaminants will settle out in low or slow flow areas of the fuel system or become part of the tank bottom sludge. Both the precipitates and the particulates get stirred into the fuel system during fuel deliveries and can plug filtering systems.

Water in fuel probably causes people the greatest concern, because it is the most common form of diesel fuel contaminant. Water is found in your fuel system in two forms, free and emulsified. Water in fuel is, in some part, related to your own or your supplier's housekeeping practices.

Most diesel fuels have some dissolved moisture. Diesel fuel has a saturation level of water at any given temperature. As the temperature goes down, the fuel will hold less dissolved moisture. Any moisture above this saturation level will not dissolve, but will fall out of the fuel as free water. Dissolved water amounts in fuel are increasing, in part, due to chemical agents used in the catalytic refining process which allow the fuel to hold more dissolved water. At this time, there is no common method to remove dissolved water from fuel.

Free water, or non-dissolved water, in the fuel tanks usually comes from the bulk storage tanks, condensation, or from dissolved water. Free water gets into your fuel as storage tank bottoms become agitated while dispersing or receiving fuel. Water, in the form of

vapor, is present in the air. We call this humidity. As air replaces fuel in storage tanks or vehicle tanks at the time of dispersing or receiving fuel, moisture, in the form of humidity, is finding its way into your fuel system. Condensation occurs as hot fuel returning from the injectors flows back into the cooler fuel tank. Dissolved water can turn into free water as the temperature goes down and the saturation level of your fuel decreases.

Free water in liquid form is heavier than fuel and settles on the slow flow or low areas of your fuel system. As water freezes, things change. Ice is lighter than fuel and floats in your system to plug fuel separators, filters, or possibly the fuel pump or injectors.

Wax is desirable in your diesel fuel, but its control in cold weather operation is needed. Wax crystal formations in diesel fuel are the result of cold temperature precipitation of paraffin. While it is possible to remove most of the wax in diesel fuels during refining, it is not usually done for two reasons. First, paraffin is a great source of heat during combustion. Secondly, to remove all wax from today's heavier crudes would be cost prohibitive.

The technical phrase "cloud point" refers to wax in diesel fuel. This is the temperature at which wax crystals begin forming in diesel fuel. At temperatures below cloud point, filters and fuel lines can become wax plugged. Cloud point does not limit fluidity or mobility of fuels. Again, we know of no available chemicals that will control or lower the cloud point.

"Pour point" (or "flow point") is another technical phrase. Below this temperature, untreated fuel will gel. Pour points and cloud points vary widely, depending upon the crude from which the fuel was made, the refining process and numerous other reasons. It is important to note that even though diesel fuel has reached its cloud point, it will still flow through the system until it reaches its pour point.

HELPFUL HINTS TO AVOID OR MINIMIZE FUEL SYSTEM PROBLEMS

Now that you know some of the problems and characteristics of diesel fuel, you may wonder if there are solutions to them. The solution is simple in theory, but it may not be quite so simple in practice. All we need to do is to melt the ice crystals, trap the water and foreign material, and raise the fuel temperature to a level above the cloud point. An expensive, complex filtering system is not needed to do this. What you will need is heat, time, separation and a filtration system that can be drained easily. All of these, plus some common sense, and you will be well under way to solving most of your diesel fuel problems.

You must be selective when you purchase your diesel fuel from your local supplier. It is difficult for him to maintain his fuel at a consistent quality. You must understand the complexities of today's fuel and be prepared to deal with them. In the long run, quality fuel is the best value.

We must all realize that when filters plug up, slowing fuel flow or stopping it altogether, they have done their job. When they seem to last a short time, it is simply that there is too much particulate, wax, gelled fuel, water, etc., in the fuel and the filters are removing it. When this happens prematurely we must take steps to correct the problem.

Here are some sensible guidelines to follow on a regular basis:

1. Care should be taken to keep fuel storage tanks dry.

Maintain good housekeeping of fuel and storage tank facilities. Inspect fuel storage tanks for proper ventilation and test for water content. If necessary, pump out water prior to cold weather. Is the fill spout area higher than the drain? Are the fill caps sealed properly?

2. If you have a fungus or bacteria problem, treat with a commercially available biocide.
3. Use proper filters and filtration techniques as shown in your owner's manual. Use Baldwin filters for quality equal to, or better than, comparable original equipment filters.
4. Drain the sediment from your machine's fuel tank on a regular basis after each use. Try to do this after the machine has set for 24 hours.
5. Do not use gasoline or alcohol as a diesel fuel additive. This blending creates a serious safety problem because of its low flash point. This also reduces the viscosity of the fuel and can lead to fuel system damage because of insufficient lubrication.
6. After receiving fuel from your supplier, let it set for 72 hours prior to use. This will allow contaminant to settle.
7. Top off fuel tanks at the end of every day to minimize condensation.

Low temperatures create problems that include starting the engine and keeping it running with a constant flow of fuel, while eliminating blockage of fuel filters due to waxing and freezing fuel lines.

How do you prevent the waxing and freezing of fuel filters and lines? You can apply a small amount of heat prior to filtration to eliminate both. Remember, fuels below their cloud point and down to pour point will flow and can be pumped through fuel lines. You could change the routing and location of fuel lines and filters so that they are closer to the engine exhaust heat. Or, you could install a commercially available fuel heating device prior to the fuel filtering system.

Artificially heating the fuel may have some drawbacks. It may increase oxidation and decrease the stability of the fuel. You can chemically treat the fuel to control the water/icing problem. These anti-icers will have to be chosen carefully to find one that will do the job without affecting performance or causing any damage to the engine. If you use an anti-icer, you will still need to control wax in cold weather.

Chemical compounds are available to reduce the size and shape of the wax crystals in their cold weather formations. These wax modifiers cannot prevent the crystallization process, but they limit the formations so they can pass through vehicle filters to produce energy during combustion. To be effective, wax modifiers must be added before the wax crystals form, usually around 12 to 15 degrees Fahrenheit. After wax crystals have formed, the only way to make the fuel usable again is to apply heat to the fuel.

SUMMARY

Through proper understanding of your fuel and the problems you may encounter, you can be ready before problems occur.

1. Purchase high quality, clean fuel.
2. Keep it clean through good housekeeping practices and a good filtration system on your storage tanks and vehicles.
3. Be ready for cold weather changes in your fuel.

UNDER PRESSURE

High injection pressures are helping to meet tougher emission standards, but they also mean that fuel filters require more attention.

It is said timing is everything, and the injection of fuel has always been a matter of timing. Add the proper amount of atomized diesel into a cylinder at just the right moment, and the engine responds with the cleanest burn and the best performance.

This explains why engineers have been investing so much of their time on systems that deliver well-timed shots of fuel at extremely high pressures.

The injection process has certainly come a long way.

The performance of traditional pump line nozzle systems was always directly dependent on the speed of the engine. At 0 rpm, the engine did not generate the pressure for an injection of fuel. Conversely, the top forces were only created at the top engine speed.

If the two points were plotted on a graph, there would be a straight line between the two, notes Tim Shick, director of business and product strategy for Navistar's engine group. At lower engine speeds, it meant that the fuel was more likely to be delivered in the form of a slug of diesel rather than a fine mist, generating the puff of smoke that would spill from the stack.

Enter electronic unit injectors that could deliver higher pressures across a wider range of operating speeds, regardless of whether the truck was accelerating or lugging.

Those higher pressures are more important than ever before.

"The solution to meeting EPA '10 (2010) emissions with good fuel economy is all about a high pressure fuel injection system and its ability to atomize the fuel. In general, the higher the injection pressure, the finer the atomization and the greater the fuel economy," explains Ed Saxman, product manager, drivetrain, with Volvo Trucks North America. "High-pressure fuel injection minimizes the soot… low soot formation means that 100 percent of the soot can be regenerated from the (diesel particulate filter) passively, without the use of additional fuel."

To suggest that modern injection systems are dealing with historically high pressures would be an understatement. The 35,000 psi pressures that are generated for today's Volvo engines are 20 percent higher than the 29,000 psi that was generated for the engines built between 2002 and 2006. Cummins is generating similar pressures, through the XPI fuel system that was produced for big-bore, on-highway engines in a partnership with Scania.

But manufacturers have taken two distinctly different approaches to modern fuel systems, either refining existing electronic unit injectors, or adopting common rail systems that pressurize a supply of fuel within the rail that feeds the injectors. Rather than generating pressure with the barrel and plunger on a unit injector, a common rail system includes a high-pressure pipe and piston pump that has enough capacity to maintain pressures at lower engine RPMs.

There are some differences in the systems, of course. Detroit Diesel's

Amplified Common Rail System (ACRS) generates 50 percent of its injection pressures with a high-pressure pump, and amplifies that pressure at the injector itself. The idea here is to limit the stress on the fuel lines and pump, as well as offering more precise control at the nozzle.

Common rail systems deliver injection pressures that are "infinitely variable and totally programmable. You can do anything you want with the fuel system," Shick says, noting how Navistar is using its approach to generate less NOx within the cylinder.

The peak pressures are not that different than those generated by an electronic unit injector. But the nozzles will open and close within 0.4 milliseconds, offering five injections per combustion event, notes Gene Gollub, a supervisor in Denso's technical services department.

"Even those two (extra) injections per combustion event help with the cleanliness," he says.

Each injection event performs a slightly different role. In the case of the five injections, the "pilot" injection allows the fuel and air to mix before injection. That is followed by the "pre" injection that helps to shorten the delay of ignition during the "main" injection that follows – reducing NOx, noise and vibrations in the process. The "after" injection re-burns particulate matter that may remain, and the "post" injection helps to manage the temperature of exhaust gases, making exhaust gas recirculation (EGR) systems more effective.

The systems also use different technologies to control the actual injection, adds ProDiesel vice president of production, Joe Hutto, referring to solenoids, electromagnetic force and ceramic-based Piezo technology, with is three times as fast as its counterparts.

CLEAN FUEL IS VITAL

One of the key preventive maintenance strategies for any of these fuel injection systems involves the related filtration of fuel, since the higher pressures also can deliver the tiny abrasive particles that can braise poppets and valves.

"The orifices and the tolerances all inside the pump and the injector are much tighter," Gollub explains. "For the common rail system, any little particle larger than, say, .25 mm in size or something like that, can cause problems."

The related damage can manifest itself in a number of ways. When fuel first begins to run back into the tank, there will be a marginal affect on the engine's fuel economy. "The first thing you see is you're a couple of tenths off on (mpg)," Shick says. As the situation worsens, the electronic fault codes begin to emerge, complete with a loss of power that can occur under extreme situations.

It all makes the condition of fuel filters more important than ever. Service technicians should be watching over all levels of filtration, such as the units that filter out water and the largest debris (Shick calls these "rock catchers"), and the engine-mounted filters that catch the finer material.

Clogged fuel filters or a bad fuel pump in the low-pressure rail that circulates fuel to the unit injectors can present a number of challenges, Gollub agrees. "It's going to be misfires, it's going to be rough idle, surges, lack of power, lagging, stumbling, hard start, no start… you're going to have your early indicators."

High injection pressures also can present other maintenance challenges. Saxman, for example, refers to issues such as cracked alternator mountings

or cracked EGR coolers that can emerge.

“Those problems arise from ‘torsional vibrations,’ or high-frequency pulsing that originates with the fuel-injection systems,” he says, noting how Volvo has addressed the issue with camshaft-mounted vibration dampers that have been used since the D12C was introduced in 1998.

“Another way torsionals can be reduced is to drive the camshaft from the rear. This focuses any remaining torsional vibrations into the flywheel, which is the rotating part of the engine with the greatest mass,” Saxman adds.

VALVE REPLACEMENTS MADE EASY

But what about the valves themselves? Where are they likely to fail?

Hutto suggests the failures normally will occur in the controlling area of the valve, such as the poppet valve on a Detroit Diesel Series 60 engine. Common rail systems, meanwhile, will tend to wear out at the nozzle and check valves.

Luckily for service technicians, one of the advantages of a common rail system comes in the form of easy injector replacements. These designs mean that there is no need to set unit injectors when running the overheads, and the need to repair highly stressed injector rockers also disappears.

Still, there are some important replacement procedures to follow with any style of injector. A number of the components cannot be re-used, even if they do seem “good enough” to fit. Seals, for example, sacrifice themselves when they are first installed.

Shick also stresses that technicians need to trust the diagnostic codes when deciding which injectors to replace.

“It’s amazing how many electronic components are returned fault-free,” he says, noting how technicians who find a fault code with one injector often decide that the rest should be replaced at the same time. “Don’t try to rationalize around the system. Don’t jump to the conclusions it’s a wear issue… with all good intentions, they (technicians) think they’re saving customer callbacks and saving themselves headaches. In the end, that causes a lot of excess expenses.”

“When using the scan tool to diagnose the vehicle, you still have to apply what you learned from your scan tool to your troubleshooting process,” Gollub adds. It means that technicians must remember to search for the root cause of a problem when injectors are being replaced. “Start fishing back into the system,” he says, referring to the filters, filler neck, fuel tank and water separator.

It is a good habit to adopt, considering that the filtration will become more important than ever in the years to come.

Hutto, for example, suggest that the industry is nowhere near the limit of the pressures that will be introduced.

“I’ve hear talk of 150,000 (psi),” he says. Engineers are obviously under some extra pressure to create the components that will support the additional forces.

Under Pressure - Proper Fuel Filtration

Injection systems for 2010 will make proper fuel filtration even more important.

A perennial topic at any meeting of the Technology and Maintenance Council of ATA is fuel filter plugging. More than a few in the audience typically say the answer is to use a wider screen filter that won't plug as quickly. But that's entirely the wrong answer, given the extreme pressure and tight tolerances in today's sophisticated fuel injection systems.

Opening up from, say, a 5-micron secondary filter to a 15-micron filter may mean less frequent filter changes and less loss of performance associated with plugging and low fuel pressure, but it is punishing the fuel injection equipment with particles in the most damaging sizes – those around 7 microns.

The most susceptible components are the injectors. Today, injectors have tiny, electro-discharge-machined and even laser-drilled holes in the 60- to 145-micron range. (To help you visualize this, a human hair is about 100 microns wide.) These work with the extreme pressure to almost atomize the fuel, even when it is presented at the injector in as many as five individual injection events. For the most complete combustion, it is essential to present as much fuel surface area as possible to the combustion process to minimize the production of unburned carbon or particulate matter. This aids fuel economy and minimizes PM in the exhaust that has otherwise to be extracted in the diesel particulate filter.

For 2010, injectors may well have holes shot-laser-drilled half this size in the never-ending drive to get finer and finer droplets of fuel. Shoveling fine dirt particles through these holes along with the fuel doesn't block them, since we're talking maybe 5- to 15-micron particles. But it does erode these finely drilled holes over time. This leads to a loss of control over the spray pattern, poor combustion and emissions control and degrading fuel economy. In the worst case, the injector may actually slobber and the wet fuel can jet-hose the cylinder wall, get into the lube oil and cause extensive wear elsewhere than just the injector.

This all takes time, and the process is so gradual the resulting degradation of performance and economy is not noticeable unless the injectors are changed through some failure, such as water in the fuel actually blowing off an injector tip.

In a higher-mileage engine this may be a good excuse to turn over all the injectors. On the Series 60, for instance, Detroit Diesel says if one injector is being replaced, it only takes two more hours to replace all six injectors to restore "as new performance." That's when you'd notice the degradation that had accumulated through injector wear.

But you'll also see the cost. The new injectors are significantly more expensive than the lower-pressure units of yesteryear.

FUEL FILTERS

It may seem obvious, but with fuel injection equipment so sensitive – and expensive – it pays to follow the engine manufacturers' recommendations on filtration. That may be difficult in a mixed fleet where technicians are working on different engines, because different engines may call for very different filters.

Yet it's critical that you put on a filter that's designed for that application, say engine manufacturers and filter makers. If you don't, the filter can plug faster or allow damaging particles to get past the filter and damage the injectors.

After the warranty period is up, some truck owners are tempted to save money and fuel filter changes by going to an alternative, less-expensive filter. Or sometimes a fleet may want to consolidate two parts numbers for filters that appear very similar. But you have to be very careful in making those types of decisions.

Swift Transportation likes to extend the service intervals out as far as the engine manufacturer will allow, using oil analysis to ensure that lube-oil protection is still okay, says Vice President Michele Calbi. But she finds that the determining factor today is the life of the fuel filters. Using the recommended filter screen sizes, she says they have to pull a truck in mid-interval just to change out the fuel filters. "That's an enormous lost-opportunity cost," she says, as well as a huge inconvenience for the driver, dispatcher and the shop. Such concerns must be weighed against the potential damage to the engine.

In looking for less-expensive alternatives, also watch out where you get the parts. At the last TMC meeting, during a discussion about parts counterfeiting, retired Caterpillar field service manager Bob Wessels pointed out that you can get what look to be genuine Cat filters at deep discounts on eBay. Beware, said Wessels: They are cheap knock-offs that simply won't perform.

Also keep in mind that water in the fuel can be just as damaging to fuel injection systems. Many truck owners go beyond the standard filter setup, opting for additional filtration or fuel/water separation.

Fuel/water separators are optional on many engines today. If yours doesn't have one, add-on fuel filters/water separators on the suction side of the fuel system can add additional fuel filtration capacity, potentially longer fuel system maintenance intervals, easy access, and heating options for cold-weather operations.

Whether you decide to add fuel/water separators or other filters may depend on your duty cycle. If you're trading in your trucks every three years while they're still under warranty, sticking with the OEM's recommendations is probably fine. But if you're keeping your trucks longer, the more you've done to minimize component wear, the better you're going to be from a fuel system maintenance cost standpoint after the warranty runs out.

And keep in mind that in order to work properly, water separators must be drained regularly.

CONFIGURATION

On-engine fuel filtration most often involves a primary filter with a relatively large screen on the suction side and a fine filter on the pressure side of the lift pump. The reasons are obvious: You want to get the biggest particles filtered with the minimum pressure drop as you pull the fuel from the tank, but with the positive pressure from the pump, you can afford to filter down finely to protect the injection system.

The new systems for 2010 will require even more attention to detail. According to David Siler, director of marketing for Detroit Diesel, there's a three-step filtration process to protect the pumps and injectors in the new Detroit Diesel HDE platform engines. "The DD15 (and DD13) engine fuel filtration system is comprised of three basic elements including a prescreen, a water coalescer and a final filter," he said. Together, "they form an integrated, unitized package that handles particle removal, water separation, air purging, fuel cooling, filling and priming, as well as precise management of flows and pressures throughout the low- and high-pressure portions of the fuel system."

In this case, filtration is in three stages, with the first at 100 micron, the second at 10 with the water removal at the same time, and the pressure side filter is 3 to 5 microns.

This partly explains the very long 50,000-mile filter change interval for the new Daimler heavy truck engines. As Siler says, this keeps drivers on the road longer instead of in the shop waiting while the technicians perform routine maintenance.

No matter how many filters you have, OEM or add-on, make sure you change them regularly. It's probably best to err on the side of caution—and make sure drivers have extras in the truck, especially as winter is *here.*

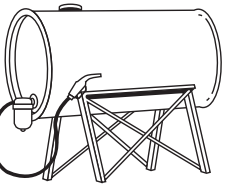
BALDWIN STORAGE TANK FILTERS

YOUR CHOICES FOR CLEANER FUEL . . . IT'S UP TO YOU.

If you own or operate farm equipment, you know the importance of using clean fuel. That's why it's wise to filter your fuel at the source - your fuel storage tank.

Baldwin storage tank filters will help prevent water, rust, fungus, bacteria, scale and grit from damaging your equipment. All Baldwin filters offer the proven filtering efficiency of our special Microlite® filter media. This unique media traps harmful contaminants, without removing the important additives in your fuel.



The outstanding feature of Baldwin's **BF956** spin-on (seen above with FB1307) is its highly absorbent media that removes moisture as well as other contaminants. If there is significant water contamination, the filter's media will swell and block fuel flow. The fuel delivery rate then drops from 15 gallons per minute to one-half gallon per minute.

The **BF955**, **BF958** and **BF971** utilize the most appropriate Microlite® paper for their applications. The BF955, at 5 9/32" long, replaces the Wix 24347 and others having shorter fit requirements. The BF958 specifically replaces the AMOCO A05 and A08, while the 7 1/8" long BF971 replaces the Luber-finer LFF2.

STORAGE TANK FILTER	LONGEST LIFE	GREATEST EFFICIENCY	GPM FLOW	DRAIN	BASE	SPECIAL FEATURES
B10-AL Hsg. & Ele.	●	■	25	Yes	B10-AL CAP	See-Through Collection Bowl
BF914 Base & Spin-on	▲	▲	25	Yes	FB1307	BF915 Spin-on
BF955 Spin-on	■	■	15	No	FB1307	Standard 5 9/32" Long Spin-on

BF971 Spin-on	■	■	20	No	FB1307	High Performance 7 1/8" Long Spin-on

● Good ▲ Very Good (Better) ■ Excellent (The Best)

The **BF914** combines a BF915 spin-on (with drain) and a FB1307 mounting head. The BF915 is about 1 1/2 inches longer than most competitive spin-on filters. The greater length and the use of a high capacity paper filter media provides longer life and greater contaminant capacity.

Spin-on Style Fuel Storage Tank Filter

Complete Filter Assembly.....**BF914**
Filter Only **BF915**
Mounting Head **FB1307**

The **B10-AL** is an element-style storage tank unit. It comes complete with PF10 filter element, a see-through amber collection bowl (B10-AL BOWL) and its own mounting head. When it's time to drain, the unit has an easy-to-open petcock for fast, efficient draining. PF10-CS, an element with water absorbing media, is also available for this model.

Baldwin gives you a choice of many different storage tank filters. Whether you use diesel, gasoline or gasohol, a Baldwin storage tank filter is the proven way to insure your fuel is clean when it leaves the tank. Each one is designed to meet the varying needs on our nation's farms. You need to make the choice of which Baldwin filter meets your particular requirements. Refer to the chart on the preceding page to help you make this choice.

STANADYNE FUEL ADDITIVES

Baldwin Filters is now offering one of the most premier lines of fuel additives in the industry. Stanadyne fuel additives are now part of Baldwin's product offering and will provide your customers with the highest quality and most technologically advanced fuel additives in the market. These cutting-edge additives provide the highest level of protection to any diesel/gasoline fuel injection system.

As a manufacturer of diesel fuel injection equipment for over 50 years, Stanadyne is familiar with fuel related issues and the effects they can have on the fuel injection system, as well as subsequent engine performance issues. This family of Stanadyne fuel additives was developed to address these and other issues for all climates and operating conditions. Stanadyne multifunctional additives are designed to improve and restore engine performance, while protecting the fuel injection system from costly damage caused by poor fuel quality.

Stanadyne additives will improve your engine's performance and fuel economy. This is achieved by using a unique combination of specially formulated additives that clean the fuel injection system while simultaneously improving the quality of the base fuel (cetane improver, lubricity improver, corrosion inhibitors and water demulsifiers, etc.).

The net result is restored horsepower, torque and increased economy. Regular use of Stanadyne fuel additives more than pays for itself as testing has shown average fuel economy improvements of 3.5%. In some cases the improvement has been as high as 15%.

Testing confirms that the advanced cleaning compounds in the Stanadyne fuel additives prevent and eliminate deposits commonly found on intake valves and fuel system components. This combination of additive technology restores your engine to its optimum performance.

STANADYNE FUEL ADDITIVES FREQUENTLY ASKED QUESTIONS

Q: What Stanadyne fuel additives are available?

A: Stanadyne fuel additives are available for diesel and gasoline engines and can be used in any climate.

Q: Where can I find information about Stanadyne fuel additives on the internet?

A: *Information about Stanadyne fuel additives can be accessed from our website, by clicking on the Stanadyne Additives button on the home page. This link will open the information in a new window.*

Q: **Do Stanadyne fuel additives contain alcohol?**

A: *All Stanadyne fuel additives are alcohol free.*

Q: **What is the shelf life of Stanadyne fuel additives?**

A: *Stanadyne fuel additives can be stored for up to 24 months without deteriorating if they are unopened and in a suitable storage environment. Additives will begin to deteriorate when stored longer or improperly and may lose some effectiveness.*

Q: **Why do I have to store Stanadyne fuel additives in a location that is above freezing?**

A: *Stanadyne fuel additives will freeze in their concentrated form, but not once they are added to diesel fuel or gasoline.*

Q: What is the Treatment Ratio of Stanadyne Diesel Fuel Additives?

A: *Treatment ratios vary depending on which Stanadyne fuel additive you are using. Please reference the product label or the Diesel Fuel Additive brochure (Form 99549)*

Q: **Can Stanadyne Diesel Fuel Additives be used in bulk storage tanks?**

A: *All Stanadyne Diesel Fuel Additives are suitable for use in bulk storage application. However, the conditions under which they are added to the storage tank will have an impact on the rate at which they disperse. The composition of the additive and diesel fuel in the tank depends on several factors such as temperature of the base fuel and additive, the size of the bulk storage tank, the degree of agitation in the tank, etc.*

If there is mixing/agitation in the storage tank, then the additive will remain mixed. However, if

there is no mixing/agitation, the level of dispersion in the storage tank will be an unknown variable.

To obtain proper dispersion in a bulk storage tank, add the recommended ratio of fuel additive to the tank prior to adding the fuel. The addition of the base fuel will provide the necessary mixing/agitation.

Q: **Are Stanadyne Diesel Fuel Additives compatible with high-pressure common rail fuel systems and will they harm exhaust aftertreatment systems?**

A: *Stanadyne Diesel Fuel Additives are compatible with all types of fuel systems and will not harm aftertreatment systems.*

Q: **Can I use Stanadyne Diesel Fuel Additives to treat biodiesel?**

A: *Stanadyne Diesel Fuel Additives will effectively treat the diesel (petroleum) portion of biodiesel up to B20 and increase water separation.*

Q: **How long will Performance Formula® Fuel Additives keep fuel stable?**

A: *The antioxidants contained in Performance Formula Fuel Additives will keep diesel fuel stable for approximately 12 months.*

Q: **What are demulsifiers and does Stanadyne Diesel Fuel Additives use them?**

A: *Demulsifiers help make water drop out of suspension, so the filter/separator can more effectively remove water. The detergents that are added to diesel fuel additives tend to emulsify water into the fuel, which can cause various issues. This is why demulsifiers are added to all Stanadyne Diesel Fuel Additives.*

Emulsified water in fuel can cause a variety of issues including:

- *Erosion of the injectors (especially in HPCR engines)*
- *A reduction of the speed of combustion resulting in still burning particles striking the cylinder wall and crown*
- *Volatility of the fuel in the pumps before entering the engine, causing fuel delivery issues*
- *Incomplete combustion/ power loss*
- *A dilution of the oil film in the engine's cylinder, leading to increased wear*
- *Corrosion in the engine and fuel system components*

Q: **Are Stanadyne Diesel Fuel Additives formulated to provide protection against the plugging of filters from asphaltenes?**

A: *All Stanadyne Diesel Fuel Additives, excluding Winter 1000®, have detergents in the chemistry that will help disperse asphaltene molecules in order to minimize fuel filter clogging.*

Q: ***When should Performance Formula® Injector Cleaner be used?***

A: *Performance Formula Injector Cleaner has concentrated detergents to clean common rail injectors and the fuel system and should be used on an as needed basis, as a "One Tank" clean up, or when performance issues arise. For preventive maintenance, use 4 – 6 times per year or at every oil change interval.*

Q: **When should Stanadyne Gasoline Additive+ be used?**

A: *The Stanadyne Gasoline Additive+ has concentrated detergents, ethanol protection and a corrosion preventative to clean the fuel injection system . Recommended use is once a month. If the vehicle and/or small engine is being stored for a long period of time, fuel should be treated with Stanadyne Gasoline Additive+ due to its ethanol protection and fuel stabilizer benefits.*

NOTES

Gasoline Fuel Additive

Gasoline Additive is designed to protect Gasoline Direct Injection and traditional gas fuel systems, while restoring engine performance. This unique formula helps eliminate deposits that form on critical fuel system and engine components to keep those components clean, lubricated, and maintenance free.

Benefits Include:

- Improves Fuel Economy and restoration of Horsepower & Performance
- Lubricates Fuel System (Injectors & Pump)
- Reduces Piston & Piston ring friction
- Detergents that clean, prevent deposit build up on Intake Valves & Injectors
- Antioxidants to keep fuel fresh longer
- Prevents Rust & Corrosion in the fuel system
- Ethanol Protection
- Catalytic Converter Safe
- Also ideal for Recreational Vehicles and Small Engines

NOTES

Lubricity Formula™

Extra strength lubricity improver for use with very dry or "winter blend" fuels such as, jet fuel, kerosene or #1 diesel

- Approved by Original Equipment Manufacturers (OEMs)
- Five times more lubricating content than other Stanadyne additives
- Recommended when excessive wear is a problem
- Cleans and protects injectors and all fuel systems components
- Demulsifies water for filter/separator efficiency
- Fights formation of corrosion and rust
- Keeps fuel fresher
- Contains no alcohol
- Specially formulated for ultra low sulfur diesel
- Can be used with bio diesel up to B20 (20% bio content)

Part Number	Package Size US Gallons	Liters	Quantity Treated US Gallons	Liters	Case Qty. Bottles
38559	8 oz.	237 ml	up to 15	60	24
38560	16 oz. (Pint)	473 ml	125	470	12
38561	64 oz. (1/2 Gallon)	1.9 L	500	1,900	6
38562	5 Gallons	19 L	5,000	19,200	1
38563*	55 Gallons	208 L	55,000	208,000	1

NOTES

Performance Formula® All Season

Stanadyne Performance Formula® protects your diesel engine and restores engine performance. The detergency and cetane improver in Performance Formula will help restore fuel economy, increase horsepower and torque.

- Restores/Increase Horsepower – detergents clean deposits in the injection system resulting in improved combustion, better acceleration, power, and torque
- Reduces Fuel Consumption – independent tests show an average of 4% improvement in MPG and gains up to 9.6%
- Cetane Improver – improves combustion resulting in better engine starting, smooth running, and reduced engine noise
- Meets all engine fuel system requirements and will not harm exhaust aftertreatment systems
- Reduces Emissions – reduces Smoke and Particulates
- Cleans and Protects – detergents and deposit modifiers help protect injection pumps, injectors, nozzles, etc.
- Reduces Wear – lubricity improvers restore lubricity to ultra low sulfur and other low lubricity diesel fuels
- Stabilizes Fuel - keeps fuel fresher and protects against formations of gums caused by oxidation
- Cold Weather Protection – improves diesel pour point up to 40°F (22°C), and cold filter plug point by up to 25°F (13°C), depending on base fuel
- Corrosion Preventative – Corrosion inhibiters will protect the fuel system from rust and corrosion
- Helps Remove Water – special demulsifiers cause tiny water droplets to come out of suspension/emulsion, so the filter/separator can more effectively remove water
- Contains No Alcohol – avoids corrosion and accelerated wear
- Specially Formulated for use with ultra low sulfur diesel fuel
- Can be used with Bio Diesel Fuel up to B20 (20% bio content approved) – increased water separation shown in bio content up to B20

Part Number	Package Size US Gallons	Liters	Quantity Treated US Gallons	Liters	Case Qty. Bottles
38564	8 oz.	237 ml	up to 30	120	24
38565	16 oz. (Pint)	473 ml	60	227	12
38566	64 oz. (1/2 Gallon)	1.9 L	240	909	6
38567	5 Gallons	19 L	2,500	9,600	1
38568*	55 Gallons	208 L	27,500	104,099	1

** 55-Gallon Drums will be special ordered and may be subject to special freight charges. Please call Baldwin Filters Customer Service Department for details.*
Add a P to the end of the part number for product with a label in English, add a C for French and a S for Spanish.

Performance Formula® Injector Cleaner

Performance Formula Injector Cleaner is formulated to prevent and eliminate Internal Diesel Injector Deposits (IDID) commonly found in Common Rail and other type of Injectors. These deposits affect injector performance, which results in various engine related issues.

Performance Formula Injector Cleaner is a "One Tank" Clean-Up of concentrated detergents designed to eliminate & prevent internal and external deposits from forming on injectors. The result is restored Engine Performance, Increased Horsepower, and Improved Fuel Economy.

Other benefits and recommendations:

- Lubricates fuel system components to help prevent wear
- Cetane improver improves combustion resulting in better starting, smoother running, and reduced engine noise
- Use 4 – 6 times per year as preventive maintenance or when engine performance issues arise
- Continued use of Performance Formula All Season or Performance Formula Warm Weather recommended with every fill-up

Part Number	Package Size US Gallons	Liters	Quantity Treated US Gallons	Liters	Case Qty. Bottles
38564	8 oz.	237 ml	up to 30	120	24
38565	16 oz. (Pint)	473 ml	60	227	12
38566	64 oz. (1/2 Gallon)	1.9 L	240	909	6
38567	5 Gallons	19 L	2,500	9,600	1
38568*	55 Gallons	208 L	27,500	104,099	1

** 55-Gallon Drums will be special ordered and may be subject to special freight charges. Please call Baldwin Filters Customer Service Department for details.*
Add a P to the end of the part number for product with a label in English, add a C for French and a S for Spanish.

NOTES

Performance Formula® Warm Weather Blend

Formulated to provide the same benefits as Performance Formula All Season (Blue Label) without cold weather protection. Performance Formula Warm Weather Blend is recommended when ambient temperatures are above 40°F (4° C).

Important: To achieve maximum benefits, Additives should be used all year, not just during the cold winter months. For ultimate warm weather protection against fuel related issues, use Performance Formula Warm Weather Blend..

- Contains Detergents that clean & protect the fuel system from deposits resulting in increased Horsepower, Torque and Improved Economy
- Lubricates fuel system components to help prevent wear caused by low lubricity fuels
- Cetane improver improves combustion resulting in better starting, running , and reduced engine noise
- Demulsifies water for more effective water separation
- Corrosion Inhibiters prevents rust/corrosion from forming on fuel system components
- Reduces Smoke and Particulates
- Stabilizes fuel by protecting against the formation of gums caused by oxidation

Part Number	Package Size US Gallons	Liters	Quantity Treated US Gallons	Liters	Case Qty. Bottles
43568	8 oz.	237 ml	up to 30	120	24
43570	16 oz. (Pint)	473 ml	60	227	12
43572	64 oz. (1/2 Gallon)	1.9 L	240	909	6
43573	55 Gallons	208 L	27,000	104,099	1

NOTES

Winter 1000

Stanadyne Winter 1000 formula provides economic cold weather protection.

- Fuel Gelling Protection – pour point reduced by as much as 40°F (22°C), depending on base fuel
- Reduces ice formation of water in fuel
- Contains no alcohol
- Specially formulated for ultra low sulfur diesel
- Can be used with bio diesel up to B20 (20% bio content)

Part Number	Package Size US Gallons	Liters	Quantity Treated US Gallons	Liters	Case Qty. Bottles
38574	16 oz. (Pint)	473 ml	125	470	12
45697	64 oz. (1/2 Gallon)	1.9 L	500	1,900	6
38575	5 Gallons	19 L	5,000	19,200	1
38576*	55 Gallons	208 L	55,000	208,000	1

Recommended Treatment: 4 ounces Winter 1000 per 30 gallons of fuel.
** 55-Gallon Drums will be special ordered and may be subject to special freight charges. Please call Baldwin Filters Customer Service Department for details.*
Add a P to the end of the part number for product with a label in English, add a C for French and a S for Spanish.

NOTES

AIR FILTER MAINTENANCE

Airborne dust and dirt can vary considerably on the farm. On a dry day when the wind is strong, the air will carry more contaminants than on a calm day following a rain. Also, the type of operation you are performing, in conjunction with what equipment you are using, plays an important part in determining the amount of service your air filter requires.

RESTRICTION GAUGES

On today's engines, an air restriction gauge is an absolute necessity. There are three types. A simple pop-up indicator is often installed on the air housing at the factory. This type of indicator lets you know, with the indicator changing from green to red, that the engine has reached a pre-determined degree of restriction. Although an engine surge can cause a premature "tripping" of the indicator, it shows it is time to check the air filter for servicing.

A second type of air restriction indicator is perhaps more effective, in that it indicates the amount of restriction. As the filter becomes progressively more contaminated, the degree of restriction on the gauge increases. A third type also shows the amount of increasing restriction and holds that reading even when the engine is turned off. It is not affected by engine surges. This type of gauge can either be mounted on the air filter housing or on the dashboard. *(See air restriction gauges below.)*

POTENTIAL TROUBLE

When an air filter housing is opened, the potential for trouble exists. There's always the chance of dirt getting into the air inlet. An operator may remove the element in an attempt to clean it so that he can get a few more hours of service out of it. Sometimes the filter is tapped against a tire, workbench or floor. The impact often breaks the end seal of the filter paper. Air will take the path of least resistance - through the break. Tapping or hitting the element against an object can also damage the shape of the element so that it will not properly seal against the housing.

AIR FILTER RESTRICTION GAUGES TELL WHEN TO SERVICE

BALDWIN NUMBERS

Dial Style	**AFG30**
Remote Mount	**AFG37R**
Direct Mount	**AFG38D**

Avoid servicing air filters too often, as well as too seldom, by using an Air Filter Restriction Gauge.

Baldwin offers three styles to take the guesswork out of air filter changes.

If compressed air is used to blow out the dirt, it is important that you don't use excessive pressure (over 40 PSI) so as not to damage the paper. The air flow should always be opposite the normal air flow direction of the filter when in use. The stream of compressed air should follow the filter pleats, not at right angles to the pleats. A good shop vacuum cleaner can also be used to remove heavy surface dirt accumulation.

The procedures for cleaning air filters can only remove large particle size dirt accumulations. To remove the finer dirt particles, some shops wash their filters. It is important that the filter be inspected carefully for damage and cleaning should be performed by a professional cleaning service. Even then, there is a limit to the number of times a filter can be washed because each washing weakens the filtering material.

Cleaning air filter elements, no matter how it is done, involves a risk in damaging the filter and does not fully restore the filter to full capacity. The cost of the filter is low enough compared to the cost of an engine overhaul that it's just not worth the risk. Never attempt to clean or reuse the inner element if one is provided.

The Baldwin warranty is voided once an air filter is cleaned.

AIR PRE-CLEANERS

Many original equipment manufacturers install a pre-cleaner in the air induction system, ahead of the main filter element. These elements have stationary blades that set up a swirling motion of the incoming air. The dirt particles, being heavier than air, are swirled to the outside of the housing, drop down to a low pressure bowl at the bottom and are evacuated through either a self-cleaning trap or a rubber unloading valve.

Other pre-cleaner units have an aspirator which attaches to the exhaust stack. Exhaust, moving through a venturi inside the aspirator, causes a constant vacuum to be applied to a scavenger tube connected to the pre-cleaner. This vacuums off the dirt collected in the pre-cleaner and expels the dirt out the exhaust.

PRE-SCREENERS AND DIRT UNLOADING DEVICES

An average tractor is estimated to take in 75 lbs. of dirt per season. A pre-cleaner removes from 80% to 90% of this dirt, so it's up to the air filter element to remove the rest.

If dirt gets past the air filter, it is drawn into the cylinders, mixing with the lubricating oil. It then scores cylinder walls and grinds away at rings and bearings. If the air filter becomes plugged, the engine becomes choked or "starved for air." When this happens, excess fuel is injected into the cylinders because of the air/fuel ratio, which can wash away the oil film on cylinder walls and dilute the crankcase oil. If fuel is trapped above the piston, it can burn a hole in the piston. Loss of air to an engine also causes overheating, loss of horsepower, excess fuel consumption and excessive bearing wear.

Tests have shown a 7.6% increase in horsepower and an 11.4%

decrease in fuel consumption after servicing a loaded air cleaner.

Agricultural machinery often has a pre-screener in addition to a pre-cleaner. The pre-screener prevents lint, chaff and leaves from getting into the air induction system. Keep the screen clean by brushing off any blockage.

If the pre-cleaner has an unloading valve, it should be checked daily. Squeeze the rubber “burper” valve to make sure all dirt is cleared. Dust cups or bowls must be emptied daily, or more frequently, depending upon conditions.

INNER ELEMENTS

Some air filter housings are equipped with two air elements, an outer and an inner. It is important to note that the inner element is merely a secondary element. The inner element will prevent contaminants from entering the intake when you are changing the outer element. You should never run an engine without the outer element in place or if you know of a problem with the outer element. You only need to change the inner element every third to fifth outer element change, or at least once per year.

SERVICING YOUR AIR CLEANER

Each time you service your air cleaner, you run the risk of damaging it, seating it wrong or knocking dirt into the housing. Use extreme care when servicing an air cleaner. In order to avoid unnecessary servicing, be sure to rely on your service indicator.

1. Be sure the engine is turned off before servicing the air filter element. Wipe the outside of the lid and housing before removing lid. Do not change an air filter in an unprotected place where dust is likely to blow into the housing.

2. Remove the lid. Check the cover to make sure it is not dented or warped. It must seal properly.

3. Remove the outer element carefully, then remove the inner element if required. Extreme care should be taken to keep dirt from falling down into the intake duct. Baldwin recommends replacing the inner element with every 3rd-5th changing of the outer element. Do not pry the old filter element out as it could cause distortion of the housing resulting in improper sealing.

4. Use a clean, damp cloth to wipe any dust left in the filter housing. Replace lid or cover housing using a clean cloth to guard against dust re-entering the housing. Do not use an air hose to clean filter housings, as this will blow dirt into the engine.

5. If the pre-cleaner consists of tubes, clean with a stiff brush, compressed air, or water. Dry thoroughly before replacing.

6. Inspect all gaskets and replace those that are cracked, have breaks, or are stretched out of shape. Usually, gaskets are located in the outer cover, inner cover, filter retention washer, filter body, dust bowl or bolts. The most frequent cause of air filter failure is in the gaskets.

7. Reassemble, using a new or cleaned filter, in reverse order. Do not attempt to clean or reuse the inner element that was removed. If bolts are used on the lid, tighten uniformly using a criss-cross pattern. Clamps and mounting bands should be checked and uniformly tightened. Make sure the dust bowl or cup fits air tight.

8. Inspect and tighten all air induction system connections. Replace all cracked or broken rubber connectors. Watch for unusual amounts of dirt “trails” or dirt gathering at a connector. This generally means an air leak.

Be Alert For Signs Of Air System Leakage

A damaged or leaky air induction system can rapidly affect the life of an engine. Thorough, periodic inspections will prevent costly problems.

- A damaged element may have areas of concentrated dust on the clean side of the element.
- A gasket leak may show up in the form of dust patterns near the seals.
- Watch all connections for tightness along with housing and air induction tubes for fractures.
- Inspect sealing surfaces for warpage or dents that can cause air leakage. Replace questionable parts.
- Check restriction gauge fittings and vacuum lines to make sure they are tight.

COOLING SYSTEM MAINTENANCE FOR HEAVY-DUTY ENGINES

There are many cooling system problems and failures. Most of these problems have occurred due to incorrect information and maintenance practices. The following will address these problem areas by correcting the erroneous information and listing the proper maintenance practices.

THE BALDWIN ADVANTAGE COOLING SYSTEM PROTECTION

Baldwin Filters offers comprehensive cooling system protection. A complete line of OEM replacement coolant filters, a choice between additive chemistry and powerful, yet safe, cooling system cleaner are the keys to this coverage. Baldwin offers an add-on filter base which allows you to convert any cooling system to the convenience of spin-on filtration, with or without chemicals.

THE NEED FOR COOLANT ADDITIVES

According to the information supplied by the leading heavy-duty engine manufacturers, 40% of all premature engine failures can be traced to some deficiency in the cooling system. Neglecting maintenance can be costly.

Engine Coolant performs a number of important functions:

- Removes heat
- Lubricates components (such as water pumps)
- Provides freeze protection
- Prevents scale/sludge formation
- Protects against corrosion

The first three functions can be accomplished by using a low-silicate antifreeze and water mixture which is commonly referred to as coolant. Additional chemicals must be introduced to the system to prevent scale and sludge formation and to provide corrosion protection. To achieve these functions, supplemental coolant additives must be added to the system either as a liquid or as a dissolving solid contained in the coolant filter.

Supplemental Coolant Additives (SCAs) typically contain inhibitors designed to prevent generalized corrosion as well as cavitation erosion, polymers that keep hard water scale from depositing on engine surfaces and buffers to reduce the acidity of the coolant. When used according to manufacturers' recommendations, most SCAs are beneficial.

HOW DO SCAs PREVENT LINER PITTING?

Cylinder liner perforation is a common cause of premature failure in unprotected engines. Liner pitting occurs as collapsing air bubbles in the coolant scour away at the unprotected outer surface of the liner. Estimates show that these imploding bubbles can generate pressures in excess of 60,000 PSI at the surface of the liner wall. If left unchecked, complete perforation of the liner is likely.

Technically, this scouring process is known as cavitation erosion. While it can appear anywhere on the cylinder liner, most pitting occurs as a narrow vertical band, perpendicular to the axis of the crankshaft. A secondary band may be found on the opposite side of the liner.

The air bubbles are primarily the result of vibration of the liner wall as the piston travels up and down in the cylinder bore. Therefore, any change in the design of the engine which increases the vibration of the liner (such as thinner cylinder walls, longer sleeves or poor mechanical fit) will increase the potential for liner perforation.

To combat the effect of cavitation erosion, all heavy-duty engine manufacturers recommend the use of SCAs. The SCAs coat the liner walls with a hard oxide film that acts as a barrier between the liner wall and the collapsing air bubbles, but does not significantly impede heat transfer. While the SCAs cannot prevent the formation or collapse of the bubbles, the oxide film is thick enough to keep the bubbles away from the liner surface, thus effectively preventing pitting of the liners.

STARTING RIGHT WITH BALDWIN COOLING SYSTEM CLEANER (CSC)

- CSC5012 (1 Gallon)
- CSC5013 (5 Gallons)

Before changing the coolant, the system should be thoroughly flushed to remove any contamination. A clean system is free of solid contaminants and oil.

CSCs are inhibited non-caustic chelating cooling system engine cleaners. CSCs are formulated to dissolve scale and corrosion products while removing silica gel and oil found in the heavy-duty truck and off-road engine cooling systems.

There are cooling system cleaners available that routinely use acids to remove deposits. The acids have different degrees of effectiveness, but all share an aggressiveness to metal surfaces within the cooling system. CSCs have inhibitors to protect metal surfaces within your cooling system during use.

WHAT WILL CSCs DO FOR MY COOLING SYSTEM?

CSCs will remove these contaminants from your cooling system:

1. Corrosion products are insoluble deposits of iron, aluminum, copper and lead formed as the result of corrosion.
2. Hard water scale is an insoluble deposit of calcium and magnesium resulting from hard water, temperature and reactions with antifreeze and inhibitors.
3. Oil contamination has always been a problem within the heavy-duty diesel engine. Some ways oil has found its way into the cooling system are from internal leaks, repairs to the system and use of additives containing soluble oil.
4. Silica gelatin has only recently been recognized as a common formulate within cooling systems. Silica gel is the result of inhibitor over-concentration with antifreeze and/or supplemental inhibitors or use of a high silicate antifreeze.

HOW TO USE CSC

CSC is easy to use. Follow these simple directions:

1. Read label for proper limitations and handling instructions.

2. Drain cooling system. Properly dispose of used coolant in accordance with city, county and state regulations.

3. Immediately flush the system. Do not allow the cooling system to dry out.

4. Fill your cooling system with a mixture of CSC and water. The proper ratio is one gallon CSC for each ten gallons cooling system capacity. While you may get improved performance from a higher concentration of CSC, do not use CSC at more than twice the recommended concentration levels. Cooling system damage may result.

5. Circulate in your system for a minimum of one hour at 180° (include turning on the heater). Do not leave in system more than three hours. Cooling system damage may result.

6. Drain the system of CSC and dispose of properly. Flush with water until clear.

7. Inspect visible parts. If hard scale deposits remain, repeat steps 1 through 6.

8. Install the recommended coolant filter.

REFILLING THE SYSTEM

Now it's time to refill the system. Use a proper mixture of 50% antifreeze and 50% water and SCAs. The quality of water used in the cooling system can significantly influence the proper maintenance of the system. For proper system maintenance, a high quality water is required. Most engine manufacturers have recommended water quality specifications.

	Caterpillar	Cummins	Detroit Diesel
Hardness	170 ppm	170 ppm	170 ppm
Chlorides	40 ppm	40 ppm	40 ppm
Sulfates	100 ppm	100 ppm	100 ppm
Total Dissolved	340 ppm	340 ppm	340 ppm

NOTE: When contacted, Mack informed us that there are no limits on water used in their engines.

Antifreeze should be used in the cooling system year-round. The glycol in the antifreeze provides freeze protection. It also provides a stable environment for gaskets and seals. These same gaskets will shrink in straight water and leakage could occur.

Some of the major problems we see in cooling systems today occur due to antifreeze related problems. One of the most publicized problems is silicate gelatin/drop-out. Silicate gel problems have increased in frequency since the early 1980s.

The two major causes of this problem are:

1. High silicate antifreezes.

2. Over concentration of antifreeze and/or Supplemental Coolant Additives.

All antifreezes used in today's heavy-duty engines should meet the SAE J1941 or A.S.T.M.D-4985 specification for silicate content. The antifreeze concentration should be held between 40% and 60% (40% antifreeze and 60% water to 60% antifreeze and 40% water).

SUPPLEMENTAL COOLANT ADDITIVES

Using the proper amount of a high quality Supplemental Coolant Additive is critical in preventing problems. When filling a newly cleaned system with fresh antifreeze and water, a Supplemental Coolant Additive is required. These additives contain many inhibitors not found in today's antifreezes or, if present in the antifreeze, they are at very low concentration levels (unacceptable for engine protection).

PRE-CHARGE VS. MAINTENANCE DOSES

The effectiveness of Supplemental Coolant Additives is highly dependent on an oxide coating on all wet surfaces. It is extremely important that an adequate concentration of SCAs be available at all times in order to form and maintain this film.

Both new and recently rebuilt engines must be first conditioned with a high dosage of SCAs to insure proper film formation. Referred to as pre-charge rate, this high dosage is usually four or five times more concentrated than the maintenance dosage. Proper pre-charge of the system is extremely critical.

The continued inward collapse of air bubbles wears away the protective film, therefore it is important to regularly replenish the SCAs. This maintenance dosage is about 25% of the pre-charge concentration. Baldwin recommends coinciding this cooling system check with the normal vehicle maintenance schedule. Replenish the SCAs by adding liquid or by changing the coolant filter which meets both normal and extended change intervals.

As both the pre-charge and maintenance dosages are given as units of SCAs per gallon of cooling system capacity, it is extremely important that the total capacity of the cooling system be accurately noted. In addition to the radiator and the engine block, remember to account for the coolant in the cab heater, oil coolers, after coolers, fuel heaters and so forth. Underestimating the volume of coolant dilutes the SCA package which then provides little, if any, protection. Though generally less dangerous, overestimating coolant capacity can lead to an over-concentration of SCAs. The formation of gels in radiators and deteriorating water pump seals can both be caused by over-concentration.

Baldwin Filters recommends the cooling system be tested at least twice annually, preferably at every service interval to monitor the level of SCAs in the cooling system.

BALDWIN BTE

Baldwin's Balanced Treatment for Ethylene Glycol (BTE) is a borate/nitrite-based inhibitor system. This formulation has proven to be successful in preventing cooling system corrosion for more than twenty years. When used at recommended pre-charge and

maintenance dosages, Baldwin BTE will maintain balanced inhibitor levels throughout the coolant's working life.

The quantity of solids in Baldwin BTE is lower than competitive products. This eliminates the problems caused by inhibitor over-concentration (higher silicate levels) and the related problems of drop-out deposits and insoluble gels.

Baldwin BTE is an excellent match for the SCAs currently used and recommended by Caterpillar, Detroit Diesel, Mack and Navistar. It is a direct replacement for DCA2 on earlier Cummins engines. Although compatible with DCA4, Baldwin recommends draining and cleaning the cooling system prior to converting a newer Cummins engine. BTE is also compatible with Nalcool 2000 and 3000.

Today's heavy-duty engine manufacturers recommend year-round usage of antifreeze. Baldwin BTE is specifically formulated to compliment both ethylene- and propylene-glycol coolants. Antifreeze levels should be kept between 40% and 60% by system volume. For ease of maintenance, most fleets incorporate a 50-50 mix of low-silicate antifreeze and water. BTE is not recommended for those systems that only use water as a coolant.

Systems Using BTE

Size of Cooling System (U.S. Gallons)	System Pre-Charge+	Maintenance Filter 12,000-15,000 Miles or 300-350 Hours (Units of BTE)
1-10	10 Units of BTE*	BW5136 (2)**
11-20	20 Units of BTE*	BW5137 (4)**
21-30	30 Units of BTE*	BW5138 (6)**
31-40	40 Units of BTE*	BW5139, BW5182 (8)**
41-50	44 Units of BTE*	BW5143 (11)**
51-60	64 Units of BTE*	BW5140 (16)**

+ Any combination of coolant filters and liquid BTE may be used to achieve the proper number of units to treat your system.

* Add 1 pint (4 Units) of BTE for every 4 gallons of cooling system capacity to pre-charge the system.

** Add 1 pint (4 Units) of BTE for every 20 gallons of cooling system capacity for 12,000-15,000 miles or 300-350 hours of maintenance.

BALDWIN BTA PLUS (Replacement for DCA4)

Baldwin's Balanced Treatment Additive (BTA PLUS) is a phosphate/molybdate/nitrite-based coolant inhibitor. BTA PLUS was introduced as a direct replacement for DCA4 used in newer Cummins engines. Because it provides the same levels of active ingredients specified by the engine manufacturer, it is equally effective as DCA4 in controlling cylinder liner pitting.

BTA PLUS can be used in either plain water or water/antifreeze systems. However, for best overall engine performance, Baldwin recommends BTA PLUS be used in systems containing 40% to 60% antifreeze by system volume.

Systems Using BTA PLUS

Size of Cooling System (U.S. Gallons)	System Pre-Charge+	Maintenance Filter 12,000-15,000 Miles or 300-350 Hours (Units of BTA PLUS)
1-6	10 Units of BTA PLUS*	BW5070 (2)**
7-16	18-24 Units of BTA PLUS*	WC16, WC12 (4)**
17-21	34 Units of BTA PLUS*	BW5072 (6)**
22-32	52 Units of BTA PLUS*	BW5073 (8)**
33-43	72 Units of BTA PLUS*	BW5074 (12)**
44-51	87 Units of BTA PLUS*	BW5075 (15)**
52-70	103 Units of BTA PLUS*	BW5140 (23)**

+ Any combination of coolant filters and liquid BTA PLUS may be used to achieve the proper number of units to treat your system.

* Add 1.25+ Units of BTA PLUS for every gallon of cooling system capacity to pre-charge the system.

** Add 1.25 Units of BTA PLUS for every 4 gallons of cooling system capacity for 12,000-15,000 miles or 300-350 hours of maintenance.

COMPLETE SYSTEM PROTECTION

When using Baldwin BTE or BTA PLUS in a regular maintenance program, the life of the coolant is approximately 250,000 miles (5,000 hours) or two years (whichever comes first). Anytime the coolant fluid is replaced, it is advised that the cooling system be cleaned and drained with Baldwin Coolant System Cleaner (CSC). Refill with a 50-50 mix of low-silicate antifreeze and water, and properly pre-charge your cooling system with SCAs.

Baldwin BTE and BTA PLUS, in a well maintained cooling system, provides maximum protection against:

- Cavitation erosion of wet sleeve liners
- Pitting of all metals, including brass, copper, aluminum and iron
- Formulation of hard water deposits on engine surfaces
- Water pump seepage caused by granular precipitate on the face seals
- Solder corrosion/bloom
- Excessive foaming
- High acidity levels
- Deterioration of gaskets or hoses

Baldwin Filters supports efforts to protect the environment. Dispose of all used coolant in accordance with regional and federal regulations. Please contact your local, city and state agencies for details on proper disposal.

BALDWIN COOLANT FILTERS

Even in well maintained systems containing proper levels of SCAs, a certain amount of solid debris may still be found. Sources of this contamination include residual core sand (from engine block casting), oxidized material and chemical contaminants. Keeping the fluid clean prevents costly down time and replacement of components such as water pump impellers, cab heaters and oil coolers.

Baldwin offers a complete line of coolant filters for most OEM applications. Coolant filters which already contain the proper maintenance dose of SCAs provide convenience and lower service costs. Baldwin coolant filters are available with BTE or BTA PLUS supplemental additives. Filters are available without additives for those who prefer liquid formulations.

EASY TO ADD SPIN-ON PROTECTION

For cooling systems which do not offer the convenience and protection of a filter, Baldwin offers a Coolant Filter Base (CFB5000). The filter base allows the user to incorporate a spin-on coolant system filter, thus expanding the life of the equipment.

The base is designed for low flow and must be hooked up in the heater circuit as a by-pass system. A by-pass system means that not all the coolant going to the heater core passes through the filter and base.

NOTE

To prevent coolant loss during filter changes, shut-off valves can be installed on the inlet and outlet lines.

MAKE-UP COOLANT

When you need to replace lost coolant, use a 50-50 mix of low-silicate antifreeze and water (as per GM 6803-M specifications). Remember, it is important to maintain the proper level of SCAs in the system. Add the correct amount of BTE or BTA PLUS for the volume of coolant being replaced. If over half of the coolant has been lost, flush and drain the system. Refill with new coolant and pre-charge according to recommendations.

PRE-CHARGE FILTER PRODUCT SELECTION

The first step in protecting a heavy-duty cooling system from damaging corrosion is to pre-charge with a high dosage of the selected Baldwin SCA. This is necessary to insure that all surfaces in the cooling system are adequately coated while still allowing enough residual SCA to provide protection until the next service interval. It is vital that the cooling system be pre-charged any time 50% or more of the coolant is replaced.

The pre-charge dosage for Baldwin BTE is one unit of SCAs per one gallon coolant. Baldwin BTA PLUS users should pre-charge at the rate of 1.25+ units of SCA per one gallon of coolant (or 5 units/4 gallons). The SCAs can be added in any combination of chemically-charged coolant filters and liquid additives meeting the required number of units.

COOLANT TEST KIT FOR BTE AND BTA PLUS

CTK5029
Tests all types of SCAs by measuring freeze point, nitrite and molybdate.
Contains: (50) Test Strips
Sample Vial
Extraction Pipet

CORRECTING REFRACTOMETER

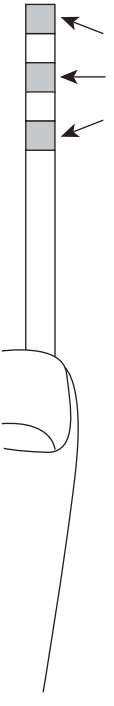
CTK5028 Refractometer accurately measures the freeze protection of your cooling system.

CTK5029,-1,-4 COOLANT TEST KITS

CTK5029 contains material for approximately 50 tests.

- One-step test for freeze point, nitrite and molybdate levels.
- No mixing or measuring of coolant required.
- Easy to read, color-coded chart indicates the condition of the SCA and proper action to be taken.
- Accurate freeze point reading of both ethylene or propylene glycol.

CTK5029, CTK5029-1, CTK5029-4 FLEETSTRIP TEST PROCEDURE



1. Collect coolant sample from the radiator or petcock. DO NOT collect from the coolant recovery or overflow system. Coolant must be between 50°F and 130°F when tested.
2. Remove one strip from bottle and replace cap immediately. DO NOT touch the pads on the end of the strip. DISCARD KIT IF UNUSED STRIPS HAVE TURNED BROWN.
3. Dip strip in coolant sample for one second, remove and shake strip briskly to remove excess liquid.
4. **45 SECONDS** after dipping strip compare and record results in the following order:
   a) Compare **FREEZE POINT** (end pad) to color chart and record result.
   b) Next compare **SODIUM MOLYBDATE** (middle pad) to color chart and record result.
   c) Finally compare **SODIUM NITRITE** test to color chart and record result.
5. All three readings must be completed **NO LATER THAN 75 SECONDS** after dipping strip.
6. It is okay to estimate a value between color blocks, if uncertain about the color match, estimate towards the lighter color block.
7. Determine on the chart in which color zone the **SODIUM MOLYBDATE** level intersects the **SODIUM NITRITE** level, and follow treatment instructions below accordingly.
8. **For best results follow test times carefully. Use a stopwatch or clock with a sweep second hand. Comparing the test strip to the color chart too soon before, or too late after, the required test time will result in incorrect readings and improper treatment – and could result in liner pitting and engine damage.**
9. All readings should be recorded on the maintenance record for future reference.

TREATMENT INSTRUCTIONS

(Yellow) - Replace service filter and add 1 pint of SCA liquid per 4 gallons of coolant.

(Green) - Continue to replace service coolant filter at each drain interval. (1 pt liquid/16 gallons)

(Red) - Do not replace service filter. Use filter without chemical until SCA level falls into green area of chart. Test at every oil change interval.

Recommended Service Per Test Results

Testing on Caterpillar, Cummins and Detroit Diesel Only

Pre-Charge Recommendations (Yellow area on chart)

Test	Recommended Service	
0.0	Pre-Charge System	Depending on System, use 4 Pints BTE or BTA PLUS and Filter
0.3	Pre-Charge System	Depending on System, use 3 Pints BTE or BTA PLUS and Filter
0.6	Pre-Charge System	Depending on System, use 2 Pints BTE or BTA PLUS and Filter
0.8	Pre-Charge System	Change Filter and Add 1 Pint of BTE or BTA PLUS or 2 Pints for System w/o Filter
0.9	Pre-Charge System	Change Filter and Add 1 Pint of BTE or BTA PLUS or 2 Pints for System w/o Filter
1.0	Pre-Charge System	Depending on System, use 2 Pints BTE or BTA PLUS and Filter
1.1	Pre-Charge System	Change Filter and Add 1 Pint of BTE or BTA PLUS or 2 Pints for System w/o Filter

Test Recommendations (Red area on chart)

Test	Recommended Service
3.1	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
3.2	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
3.3	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
3.5	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
3.6	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
3.7	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
3.8	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
4.1	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
4.3	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
4.4	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
4.9	Change Filter to B5134, Do Not Add Additive, Retest Next Service Interval
5.1	Drain and flush system, pre-charge system as recommended in tables on reverse side according to cooling system size.
5.7	Drain and flush system, pre-charge system as recommended in tables on reverse side according to cooling system size.

Service Recommendations (Green area on chart)

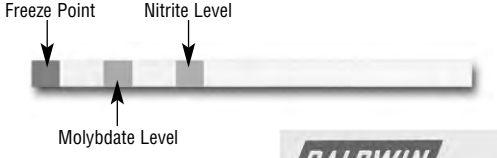
Test	Recommended Service
1.2	Change Filter or Add 1 Pint of BTE or BTA PLUS
1.4	Change Filter or Add 1 Pint of BTE or BTA PLUS
1.5	Change Filter or Add 1 Pint of BTE or BTA PLUS
1.6	Change Filter or Add 1 Pint of BTE or BTA PLUS
1.7	Change Filter or Add 1 Pint of BTE or BTA PLUS
1.8	Change Filter or Add 1 Pint of BTE or BTA PLUS
1.9	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.0	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.1	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.2	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.3	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.4	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.5	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.7	Change Filter or Add 1 Pint of BTE or BTA PLUS
2.8	Change Filter or Add 1 Pint of BTE or BTA PLUS
3.0	Change Filter or Add 1 Pint of BTE or BTA PLUS

1 pint is equal to (1) BW5071 or (1) BW5137 filter. B5134 is a coolant filter with no additives.

FLEETSTRIP COOLANT TEST KIT

Test Strip

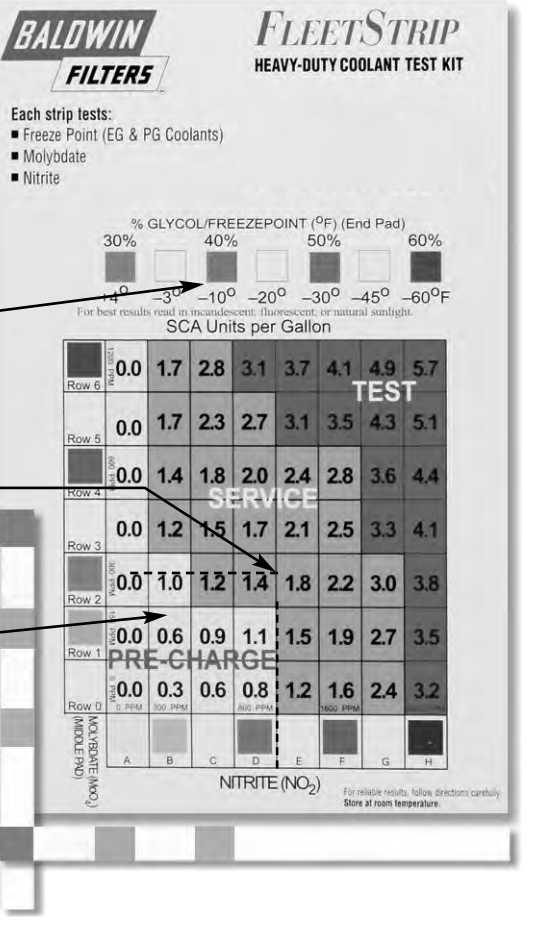
Three test pads provide one-step readings.



Match the Freeze Point color change to this chart area for easy verification of protection level.

Determine where the two concentrations intersect and read the protection level. Treatment instructions are included with test kits.

Note: Use Row "0" to match Nitrite-Borate formulas.



Treatment Instructions

(Yellow) - Replace service filter and add 1 pint of SCA liquid per 4 gallons of coolant.

(Green) - Continue to replace service coolant filter at each drain interval. (1 pt liquid/16 gallons)

(Red) - Do not replace service filter. Use filter without chemical until SCA level falls into green area of chart. Test at every oil change interval.

NOTE: Do not use chart shown here for FleetStrip comparison. Use chart provided with the test kit. Do not use Baldwin test kits on Extended Life Coolant (ELC).

BW5200 & BW5201 Controlled Release Coolant Filters

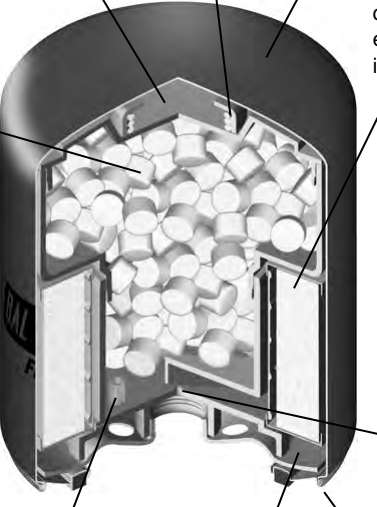
Baldwin's Controlled Release Coolant filter utilizes a patented process that allows Supplemental Coolant Additives to be released at an even rate into the coolant system only when heat and coolant flow are present.

Our field tests show that the supplemental additives are released at an even rate. This is important because competitors' filters can "dump" all the additives at once, potentially over-charging the system, leading to additive drop out. The other extreme is not releasing enough additives, towards the end of a maintenance period and leaving the system vulnerable to cavitation erosion and corrosion.

Spring Protector
isolates dissimilar metals to prevent corrosion.

Injection Molded Plastic Chamber
contains Controlled Release Coolant Pellets, which are located upstream of the filter media.

Epoxy Coated Housing
reduces the possibility of corrosion during extended service intervals.



Controlled Release Coated Pellets
diffuse SCAs into the system (when exposed to heat and coolant flow), which are then filtered, prior to entering the engine. BTE and BTA PLUS Supplemental Coolant Additives provide the best protection from cavitation, scale, rust and other forms of corrosion, while reducing the potential for water pump seal leaks.

Synthetic Media
is designed to withstand heat and degradation from long-term exposure to coolant flow. High capacity and efficiency allows media to trap contaminants that could reduce system efficiency.

Flow Control Orifice
meters flow of coolant through filter.

Double-Rolled Tuck Lock Seam
prevents coolant leaks.

SCA Diffusion Control Orifice
meters diffusion of SCA chemical into coolant flow (to allow SCAs to be released in the amount required to maintain proper system balance) for up to 150,000 miles of service.

Heavy-Duty Baseplate
made from stamped steel, is designed to withstand extended service intervals.

COMMON PROBLEMS FOUND IN COOLING SYSTEMS

The following chart is a listing of the six most common problems seen in today's cooling systems. Along with each problem is a description of how it occurs, how it affects your engine and most importantly, the cure.

PROBLEM	HOW IT HAPPENS	WHAT IT CAN DO	THE CURE
RUST *	Oxidation within the cooling system.	Clog the system. Cause accelerated wear.	The inhibitors in a quality Supplemental Coolant Additive prevent the oxidation necessary for rust to occur.
SCALE	Present in all tap water are salt minerals, especially calcium and magnesium. These minerals can solidify and adhere to hot metal surfaces.	1. Clog system passages. 2. Deposit on high temperature areas and reduce the heat transfer rate causing hot spots. This results in uneven metal expansion, scuffing, scoring, accelerated ring wear and eventually, cracked heads and/or blocks.	The Supplemental Coolant Additive keeps salt minerals in suspension so they cannot deposit on engine metal surfaces or clog passages.
ACIDITY	1. Ethylene glycol antifreeze reacts with oxygen in the air and forms acids. 2. A loose head gasket or other leakage can allow sulfuric acids formed by the burning of fuel to leak into the cooling system.	Corrode iron, steel and aluminum.	A quality Supplement Coolant Additive neutralizes acids to prevent corrosion.
PITTED CYLINDER LINER	Constant vibration of the cylinder liner causes a momentary vacuum to form on its surface. Coolant boils into the vacuum and vapor bubbles implode on the surfaces of the liner, penetrating unprotected liners.	Cause pits which can extend, over time, through the thickness of the liner and allow coolant to enter the combustion chamber or crankcase.	The Supplemental Coolant Additive coats the liner with a thin film to protect it from erosion without impeding heat transfer.
FOAM	Foam - the aeration of coolant - occurs from air leakage into the system.	Adds to the cavitation erosion problem, particularly in the area of water pump impellers.	Today's Supplemental Coolant Additives have an anti-foam agent to prevent formation of air bubbles. This foam prevention agent is effective at all temperatures, including startup.
PITTED WATER PUMP IMPELLERS	Flow rates and turbulence are high at the impeller blade. This causes cavitation. In addition, there is a possibility that abrasive particles are present in the system.	Causes loss of pump efficiency and total pump failure.	The Supplemental Coolant Additives protect the impeller from cavitation erosion and the filter holds particulate matter to reduce wear on cooling system components.

***** It should be noted that rust can appear even within a chemically protected system when oil is present in the coolant. If you do notice the presence of rust, the oil cooler should be inspected for possible leaks.

Spin-on Filter Applications

Spin-on filters are still the most popular design for liquid filtration on internal combustion engines. The spin-on design offers an efficient, quick and clean method for servicing liquid filters. The spin-on is by far the preferred method of filter design on automobile and mobile heavy-duty equipment.

Over the years, a proliferation of filter sizes have evolved. These include length, diameter, sealing gasket diameter and thread size variation. The internal design of spin-on filters also vary. Some designs utilize internal by-pass valves and/or anti-drainback valves. Filtration media used in different models also vary depending on different service and engine requirements. Operating pressure requirements can also differ from model to model.

With all the different spin-on filter models available in the market today, the user must use extreme caution not to use a wrong filter for his/her particular application. There are filters that look alike and may even fit different engine mounting bases with the same thread size. However, this does not constitute or guarantee that the correct filter is being used. Misapplication problems could be very serious. Wrong thread size is one of the common mistakes. Failure to use the recommended filter with the correct thread size could result in improper mating of filter to mounting base. A loose thread fit may cause a leak, fatigue failure or loss of filter. Any of these cases can cause engine damage or fire. A "tight" thread fit can cause leakage, thread seizure or cross threading, resulting in damage to the engine mounting base and filter. A multitude of thread sizes are used in spin-on filters. Both Metric and United National threads are widely used. Some of the Metric and United National threads are close in size to the U.S. threads and a spin-on filter may "fit" a mounting base and yet have a different thread than the base. The Society of Automotive Engineers (SAE) has published a Recommended Practice that identifies dimensional characteristics and mounting configurations of filter base mountings. This Recommended Practice, SAE J363, lists the thread sizes of the more commonly used spin-on filters and their recommended application.

Other considerations of mis-application include getting the wrong combination of by-pass settings, anti-drainback valves, filterability characteristics, operating pressure, sealing gasket diameter, interference and by-pass valve elimination. Failure to use the filter recommended by the filter manufacturer could interfere with proper engine protection.

Filter design and application is a complex process requiring the proper order of components. Don't take the chance of altering this order which would result in equipment damage or hazardous operation. The key to eliminating these problems is application. Be sure that the source of recommended application is a correct one. Filter manufacturer's catalog application recommendations should be followed.

When it comes to choosing the correct filter, one can't rely on cross-reference, "fit" or "feel." Be sure that the spin-on filter application is correct.

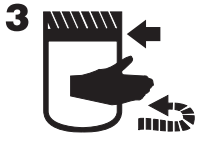
Installation Instructions For Automotive Spin-on Oil Filters

An increasing number of motorists today are performing oil and filter changes on their cars. However, present installation instructions vary from manufacturer to manufacturer, and may be confusing to the installer.

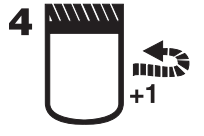
These instructions may be used in changing any spin-on oil filter.

1. **Clean base.**
   Unscrew and remove old filter. Be sure old gasket is removed with filter. Wipe filter mounting base with clean cloth.

2. **Apply clean oil to gasket.**
   Apply thin film of clean motor oil to new filter gasket. Do not use grease.



3. **Spin on to gasket contact.**
   Line up threads carefully to avoid cross-threading. Spin new filter on until gasket contacts base.



4. **Tighten additional turns.**
   Tighten filter the required number of turns beyond gasket contact. Important - Follow instructions of filter manufacturer (usually found on filter) for final tightening. This example shows to tighten filter 1 turn past gasket contact. This may be different for other filters.

5. **No leaks.**
   Be sure oil shows full on dipstick. Start engine and check for leaks. Correct source of any leaks observed. Shut off engine. Re-check oil level. Add oil if necessary.

6. **Inspect for dents.**
   Important – Do not use filter if it is dented.

New Generation Cartridge Style Oil Filters

Prior to the mid 1950s virtually all engine oil filters were of the cartridge style. Changing the oil filter was a very messy job that could result in a good deal of oil leakage both in and around the area of the housing and on the mechanic or technician. The cartridge housing had to be thoroughly cleaned, which in some cases required removal of the housing. On many applications there were various internal housing components that also had to be cleaned and properly positioned when installing the new cartridge. Due to variations in housing designs, the installation of the filter and proper placement of the housing sealing gasket also required various installation techniques.

The introduction of the spin-on filter in the mid 1950s solved many of the cartridge filter installation problems. It made the changing of the oil and filter more user friendly and allowed many vehicle owners to assume the responsibility of changing their own oil and filters. However, changing a spin-on oil filter today may still result in oil leakage to the surrounding area and onto the servicing technician.

Space has become a premium in the engine compartment of today's vehicles. As a result the oil filter can be very difficult to locate and change. In the late 1980s European original equipment manufacturers began reverting back to the cartridge style oil filter. We see this same trend beginning to appear in our North American produced vehicles.

This change from a spin-on filter to the new cartridge filter offers several advantages. The first and most obvious is filter disposal. The disposal cost of a cartridge filter is far less than that of a spin-on filter. This is also an attempt by the individual OE manufacturers to establish standardized oil filter cartridge sizes, thereby eliminating the number of different part numbers required to service a particular brand of vehicle. The new cartridge filter housing will also be located on the top or side of the engine compartment making them accessible from above without the need to raise the vehicle.

Today's cartridge style filter housings are designed with a screw-on type cap and a single housing sealing gasket. The housings are also self draining enabling the filter housing to be drained back into the engine prior to the filter change-out. After the housing is drained the housing top is then unscrewed and the used filter cartridge and housing sealing gasket removed without any unnecessary oil leakage. The new filter is then installed in the housing or fitted to the housing cap. The new sealing gasket is installed and the housing cap tightened per installation instructions. The used engine oil is then drained from the crankcase. New oil is added and the engine started to check for proper oil pressure or any possible oil leakage. The service is now complete.

There is also a variation to the complete cartridge replacement. The same style of housing is used but instead of replacing the complete cartridge only the used pleated paper media pack and sealing gasket are replaced. The media pack end caps as we know them today would be reusable and only the paper pack itself would be replaced.

The cartridge style filter is back and will be the oil filter configuration of the future.

Answers To Questions Farmers Frequently Ask

Most questions are answered in this booklet but here are some questions that might be on your mind:

Can I get Baldwin Filters for my trucks and automobiles?

Yes. Your Baldwin supplier has access to over 6,000 different part numbers. Fleets of all sizes use our filters because maintenance superintendents appreciate Baldwin's heavy-duty protection.

Do I need any other catalogs to determine car and truck filters?

No. Spin-on lube filters, extracted from our applications catalog, are listed in condensed form in this catalog. Any oil, fuel, air, or transmission filter for any vehicle, whether listed here or not, can be obtained from your Baldwin supplier. Just tell him the make and model of the engine or the number and brand of filter being replaced.

Can I use Baldwin filters on equipment still under warranty?

Yes. It is against the law for the equipment manufacturer to void warranty simply because the filter used doesn't have their label. Our filters meet or exceed all equipment manufacturer's performance specifications. When you use our filter, you get extra protection for your equipment and your warranty.

Can I assort quantities to get the case lot prices?

Most dealers participating in the Baldwin Farm Program do permit you to assort quantities and still give you case lot prices, particularly on fuel filters. However, they are under no obligation to do so. In fact, they are free to set their own qualifying minimum purchase amount before letting you buy at these low money-saving wholesale prices.

What is the most important step in changing filters?

Inspection afterwards to make sure the seal is complete. If you make sure you have the right filter installed in the right way with the right gasket, the filter can do its intended job.

Can I be a Baldwin Dealer?

This is up to the Baldwin distributor in your area. He may already have all of the dealers he can use. Or, he may give you a commission for selling to other farmers. Custom applicators and custom combiners often sell a year's supply of filters while lining up their next season's job.

Contact your Baldwin Distributor if you have other questions you would like answered.

Filter Change Tips

Baldwin Filters offers these suggestions for you to follow when making filter changes.

On element-type filters, be very careful not to put sideways pressure on the filter cartridge when you are removing the housing cover or old filter element.

Wipe out the housing to make sure no dirt enters the system. Make sure that no part of the old gasket remains on the housing. A filter that leaks because it's not sealed properly cannot be expected to filter effectively.

On 750-size and 500-size housing, clean and inspect the T-handle assembly. If you disassemble it to replace the seal, be sure to reassemble it properly.

After installing a new element, use a new gasket on the housing lid. Lubricate the gasket of a spin-on filter before installing it.

The most important step in changing filters – check to make certain the filter has sealed. No matter how good the filter, if it is not sealed, it will not work! Check it before and after adding new oil.

TECHNICAL SERVICE BULLETINS

FILTER MANUFACTURERS COUNCIL

Many excellent Technical Service Bulletins have been published by the Filter Manufacturers Council. These bulletins provide technical information on a wide variety of questions associated with filter use and servicing.

SERVICE ENGINEERING BULLETINS

The Baldwin Service Engineering Bulletins provide the latest technological news and filtration information from Baldwin Engineering. These bulletins discuss a wide variety of topics and products related to air, oil, fuel, coolant and hydraulic filtration.

NUMBER	TITLE	DATE
15-2	RS30065 and RS30065 KIT	September 15, 2015
15-1	Installation Instructions for RS5287XP and RS5288XP	May 12, 2015
08-1	Baldwin Fuel Filters Compatible with Certified Bio-Diesel Blends	June 6, 2008
06-2	Baldwin Filters for New Racor® Housings PF7889 Series and PF7890 Series	June 6, 2006
05-2	Primary Fuel Filters for Use in Davco Fuel Pro™ Housings	February 1, 2005
02-3	Wear Conditions Found on Cummins Engine Mounting Bases	April 2, 2002
00-1	Protect Your Diesel Engine Against Cavitation Erosion	January 4, 2000
99-3	Extended Life Antifreeze/Coolant	September 7, 1999
98-6	Oil Analysis: Using the Results	June 16, 1998
98-5	Substituting Filters	May 19, 1998
97-9	Baldwin BT287 Family Gaskets	November 18, 1997
95-11	Filter Performance and Micron Ratings	November 14, 1995
94-14	Diesel Fuel Contamination and Fuel Filter Plugging	December 13, 1994
94-9	Radial Seal Air Filters Mixing Brands of Outer and Inner Elements	August 16, 1994
94-8	Use of Baldwin Products in Aircraft Applications	May 17, 1994
93-11	Cleaning of Heavy-Duty Air Filter Elements	September 14, 1993

PRODUCT INVESTIGATION

PROCEDURE FOR SERVICE ENGINEERING PRODUCT INVESTIGATION

This procedure outlines the steps necessary for Baldwin Filters Service Engineering to complete an investigation of product from the field. The steps of this procedure are necessary to provide the most accurate and timely investigation possible.

If a filter is suspected of causing a failure, don't throw away the evidence. Instead, in order to process a warranty claim, follow the Product Investigation Procedure . . .

1. Complete a Field Report Form (Form 387). Describe the events on a separate sheet.
2. Obtain a sample of oil, fuel or coolant in the system at the time of the failure.
3. Save damaged parts for evidence of the claimed damage.
4. For an air filter, cover the open ends with tape to prevent dust from entering the element during shipping.
5. Send copies of any repair bills.
6. Send the entire suspect filter, including the gaskets.

If the investigation is being requested for warranty consideration, repair bills (not estimates) should also accompany the request. Damaged equipment components such as bearings, liners, etc. should be retained by the customer for possible examination by Service Engineering.

Filter products are **NOT** to be cut open or otherwise tampered with. This may prevent objective analysis and testing, and **may void the warranty**.

Notice of damages and claims should be made immediately when the damage occurs. Every claim will receive careful and objective consideration. If a Baldwin product is proven to have caused damage, Baldwin will pay the cost required to repair the equipment to its condition at the time the failure occurred. Liability payment will not include consequential damages such as downtime, motel bills, etc.

MANUFACTURERS' WARRANTIES

Consumer purchasers of automotive filters are sometimes told by an automobile dealer's service writer or mechanic that a brand of replacement filter cannot be used in the consumer's vehicle during the warranty period. The claim is made that use of the brand will "void the warranty," with the statement or implication that only the original equipment brand of filters may be used. This, of course, tends to cast doubt on the quality of the replacement filter.

That claim is simply not true. If the consumer asks for the statement in writing, he will not receive it. Nevertheless, the consumer may feel uneasy about using replacement filters that are not original equipment. With the large number of do-it-yourselfers who prefer to install their own filters, this misleading claim should be corrected.

Under the Magnuson-Moss Warranty Act and general principles of the Federal Trade Commission Act, a manufacturer may not require the use of any brand of filter (or any other article) unless the manufacturer provides the item free of charge under the terms of the warranty.

So if the consumer is told that only the original equipment filter will not void the warranty, he should request that the OE filter be supplied free of charge. If he is charged for the filter, the manufacturer will be violating the Magnuson-Moss Warranty Act or other applicable laws.

By providing this information to consumers, the AFMC can help to combat the erroneous claim that a brand of replacement filter other than original equipment will "void the warranty." It should be noted that the Magnuson-Moss Act applies only to consumer products, and not to businesses such as fleets or government agencies.

BALDWIN FILTERS
DATE CODING METHODS

You will find several different date coding methods used on Baldwin products and packaging. Please look for one of these coding methods whenever you are trying to find the date of manufacture for a Baldwin product.

- **Six (6) Digit Numeric Code - e.g. 010311**
  Introduced November 8, 2002 (Replaces (3) Digit Numeric Code)

1st Two Digits	- 01 -	indicate month (January)
2nd Two Digits	- 03 -	indicate day of month (3rd)
Last Two Digits	- 11 -	indicate year (2011)

- **Eleven (11) Digit Numeric Code - e.g. 08291114301**
  Introduced November 8, 2002 (Replaces (10) Digit Numeric Code)

1st Two Digits	- 08 -	indicate month (August)
2nd Two Digits	- 29 -	indicate day of month (29th)
5th and 6th Digits	- 11 -	indicate year (2011)
Next 4 Digits	- 1430 -	indicate time of day (Military) (2:30 p.m.)
Last Digit	- 1 -	indicates filter line

Date Coding Methods Used Prior to 2003

- **Three (3) Digit Numeric Code - e.g. 082**

1st Two Digits	- 08 -	indicate month (August)
Last Digit	- 2 -	indicates year (2002)

- **Ten (10) Digit Numeric Code - e.g. 0829214303**

1st Two Digits	- 08 -	indicate month (August)
2nd Two Digits	- 29 -	indicate day of month (29th)
5th Digit	- 2 -	indicates year (2002)
Next 4 Digits	- 1430 -	indicate time of day (Military) (2:30 p.m.)
Last Digit	- 3 -	for internal control purposes

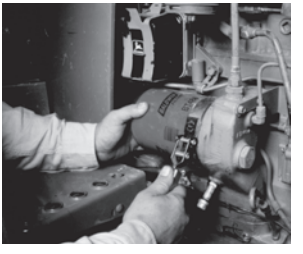
- **Numeric Digits and Diamonds - e.g. 234 ◆◆◆◆◆**

1st Digit	- 2 -	indicates last digit of the year (2002)
Diamonds	- ◆◆◆◆◆ -	indicate month (August) Number of diamonds subtracted from 13 equals the month (13 - 5 = 8 = August)

IMPORTANT NOTICE

All product applications and specifications in this catalog are based on authoritative information at the time of publication. However, there are many filter options offered by equipment manufacturers during a given model or production year, and for this reason it is impossible to be absolutely certain that all equipment of the same make and model will use the same filter. We cannot be responsible for misapplications.

Baldwin Filters is Committed To Quality and Coverage



Today there is more pressure on farmers and livestock producers to be cost effective. It takes additional planning and conservation of financial resources just to stay in business. Baldwin Filters is committed to maintaining costs while still providing quality filters.

Baldwin has been producing filters for engine-powered agricultural equipment for over 75 years and has the coverage you need for your equipment. Baldwin filters provide the extra, heavy-duty protection required on today's high-tech ag equipment. It is important to maximize your equipment investment and to protect your equipment with Baldwin filters.

An integral part of protecting your equipment is maintenance, and maintenance is impossible without filters. Understanding the types of filtration and what filtration does for your equipment system can be an important first step in providing better maintenance. By following the suggestions and practices explained in the articles in the maintenance section of this book, you should be able to extend engine life, maximize horsepower, save fuel and obtain above average service from your equipment.

Baldwin Filters is committed to providing the filtration coverage you need for all your engine-powered equipment. In addition to the information included in this catalog.

BALDWIN FILTERS®

THE BALDWIN DIFFERENCE

Commitment

Baldwin Filters is committed to manufacturing and selling the highest quality filters.

Coverage

Baldwin filters fit thousands of farm applications, providing more than 6,000 different lube, air, fuel, hydraulic, coolant and transmission filter products. Baldwin filters can be found at distributors around the world, so you can find the filter you need when you need it.

Quality

Total Quality Management drives our manufacturing process. Every phase, from raw material purchase to final inspection, is designed to meet high quality standards.

Protection

Each Baldwin filter is designed according to strict industry specifications. That means when you use the proper Baldwin filter, your equipment is protected from contamination.
