INSTRUCTIONS FOR USE

User information

The crossed-out wheeled bin symbol on either the equipment or the packaging means that the product must be disposed of separately from other urban waste at the end of its service life.

Any user who plans to dispose of this instrument may:

- deposit it at an electronic or electrotechnical waste collection point
- return it to the dealer upon purchase of an equivalent instrument
- in case of products for professional use only, contact the manufacturer, who will have to arrange for proper disposal.

Properly disposing of this product allows the raw materials used in it to be reused and prevents damage to the environment and human health.

Unauthorized disposal of the product constitutes a breach of the provision concerning hazardous waste disposal and involves enforcing the sanctions provided for by law.

INSTRUCTIONS FOR USE

Before operating the lamp, it is important to make sure that the conditions below are satisfied:

- 1 - **First use:** before using the lamp for the first time, charge the battery for 8 hours.
- 2 - **Supply voltage:** the supply voltage should match the plate data of the lamp.
- 3 - **Lamp base:** the lamp base automatically puts the lamp into the charge mode once it is placed in its socket. The start-of-charge state is shown by the red colour of the front LED. When the charge is complete or the lamp is not there, the LED will turn green. If no voltage is present on the plug, the LED will be off.
- 4 - **Electric terminals:** because of the presence of unprotected electric terminals, which are required for the lamp to be recharged, the lamp should not be used in the presence of flammable substances. In addition, metal bodies should be prevented from short-circuiting the electric terminals in the lamp base. The lamp base can be fixed to a vertical wall. While charging, the lamp may overheat slightly; do not charge the lamp in flammable environments.
- 5 - **Turning lamp on/off:** To turn the lamp on/off, press the button on the back. When the internal battery is almost dead, a red LED on the on/off button will turn on (fig. 1). Charge the lamp on the base.

Specifications:

Power: 4 W - Discharge time: 4.2 hours - Battery: lithium polymer, 3.7 V; 4200 mAh - Brightness: 320 lumens - Light angle: 120° - IP65

WARRANTY

12 months from date of purchase - The warranty consists in free repairs or replacements at our headquarters - The warranty does not cover replacements or repairs of any parts subject to normal wear and tear as the result of operation - The warranty will not apply if the device is damaged through misuse.

Declaration of conformity (CE)

Beta Utensili S.p.A., certified according to the UNI EN ISO 9001 standard, declares that the product 1838/11LED is in conformity with the 2014/30/EU (EMC) - 2014/35/EU (LVD) - 2011/65/CE (RoHS) issued by the Commission of the European Community.
