

Ironoxx™ Integral Concrete Pigment

Ironoxx™ pigments are manufactured to the strictest quality control standards to assure uniform and consistent coloring. Recommended for coloring ready-mix concrete and other masonry products including concrete blocks and pavement.

Color chips represented here show approximate results.

Variations should be expected due to jobsite conditions and finishing techniques. A test pour should always be performed.

Applications

Disintegrating bags can be added directly to the concrete

Approximate mix ratios:

- 1 or 2 lbs. of Ironoxx™ per 94 lb. bag of cement for light shades
- 2 or 4 lbs. of Ironoxx™ per 94 lb. bag of cement for medium shades
- 5 or more lbs. of Ironoxx™ per 94 lb. bag of cement for darker shades

Using grey cement will result in “buff” or softer color

Using white cement will result in “brighter” or pastel color

To ensure consistent color, keep all variables the same from batch to batch

Variations in the mix design, mixing time, and curing conditions, will affect the final color

Always perform a sample batch to confirm acceptability of the color result
