6447, 6448, 6449 and 6642

6447 TIME SAVER MAGNETIC BASE

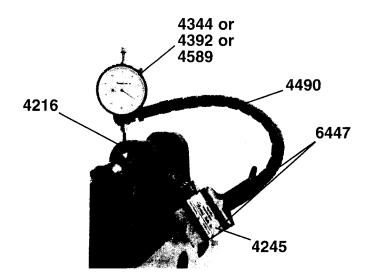

6448 1" RANGE TIME SAVER DIAL INDICATOR SET

OR

6449 30mm RANGE TIME SAVER DIAL INDICATOR SET

OR

6642 1" RANGE HIGH PRECISION TIME SAVER DIAL INDICATOR SET

Number

4344 1" Range Indicator, .001" Grads

or

4589 1" Range Indicator, .0005" Grads

or

4392 30mm Range Indicator

4216 Contact Point (part of indicator)

4490 Flex-Arm

6447 Magnetic Base w/Flex-Arm

4245 Magnetic Base only

Some uses for the Time Saver Dial Indicator Set:

Checking – camshaft wear
valve guide wear
timing gear backlash
pinion gear backlash
driveshaft runout
disc brake runout

transmission shaft end play

crankshaft end play

Setting Up The Time Saver Dial Indicator Set

- Unlock the cam lever on the magnetic base so that the fingers will slide up and down. Push all the fingers down to their maximum extension.
- Attach the base and push the finger segments down to properly conform to the irregular surface.
- Cycle the cam enough to compress the gaps between the segments, maneuver the base to desired angle and then cycle the cam completely around to lock the fingers in place.
- Loosen the round nut on the indicator clamp and insert the indicator shank through the hole. Tighten the nut to lock the indicator in position.
- Position the indicator plunger against your work piece so that it is slightly depressed. Rotate the cam lever to lock the flex-arm in place. If the arm will not lock in position, adjust the cable tension by turning the knurled nut, located under the cross head, at the outer end of the arm. (See illustration).

CONNECTOR

CONNECTOR

SWIVEL THUMB NUT

TO ADJUST RIGIDITY

1. Unlock Cam Lever
2. Hold Connector in one hand and bring
Swivel Thumb Nut down a turn or so.

3. Re-Lock Cam Lever

In locking the arm in position, do not overtighten the lever. This
will weaken and eventually break the cable. It is necessary
to only tighten sufficiently to hold the arm in position. Cable
breakage is not covered by warranty.

To Take a Reading

The #4344 dial indicator is graduated in increments of .001". One full revolution of the large pointer is .100" and ten full revolutions is 1.000".

The #4392 dial indicator is graduated in increments of .01mm. One full revolution of the large pointer is 2.0mm and fifteen full revolutions is 30mm.

The 4589 dial indicator is graduated in increments of .0005". One full revolution of the large pointer is .050" and twenty full revolutions is 1.000".

A revolution counter, (small pointer), is provided to assist in taking long travel readings. It is to be used in conjunction with the large pointer.
