

STATIC ZAP

DF-EZAP

STATIC ELIMINATION TOOL

StaticZap Anti-Static Device Saves Time & Money During the Painting Process

Dent Fix would like to introduce the DF-EZAP StaticZap (DF-EZAP) anti-static device that keeps the surface clean during the paint process to avoid unnecessary reworking and buffing, saving both time and money.

Static attracts dust and unwanted particles, making it very difficult to keep surfaces clean and causing blemishes in the paint's finish and other work surfaces. It's absolutely essential to eliminate static from the environment—at every stage of painting—in order to avoid costly reworking.

The StaticZap incorporates the efficiency and power of an air amplifier with the proven technology of corona ionization to produce a highly effective anti-static blow-off gun.

Perform the anti-static blow off before starting and at every stage in the painting process to eliminate fisheyes and produce a finish that looks like glass. The two-minute anti-static cuts down the time needed for wet sanding and buffing which saves time on prep work and also cuts down on labor and materials.

The Kit includes a lightweight durable gun, rechargeable lithium ion battery, two emitter pins, safety keys, and case.

- **Removes static charge eliminating dust attraction, keeping surface clean**
- **Saves Time on Color Sanding**
- **Great for Window Tinting and Vehicle Wrap**
- **Rechargeable Lithium Ion Battery**
