

QUICK TIPS

To use the Innova® Battery Charging System Monitor, please follow the included instructions and refer to these tips.

Battery Monitor Results

Low battery voltage (yellow or red LED) is not always due to a dead battery. It could be an indication of several things, including:

- Possible problem with the alternator;
- dirty battery terminals;
- extreme outside temperature;
- undercharged battery;
- etc.

Next Steps

Before you purchase a new battery, try the following:

- Check for loose battery cables, corroded terminals, and deposits on the connections
- Clean battery terminals
- Charge the battery
- Consult your factory service manual
- If in doubt, see your mechanic or dealer
