# We Call These Video Borescopes “High-Performance Systems” for Several Good Reasons:

- They use our thinnest probes, with diameters as small as 3.9mm (0.15 in.). Even our thickest general-purpose high-performance probe, at 6mm across, is no thicker than a No. 2 pencil lead.
- The probes have superior optical specs, including close-focus and far-focus depths of field.
- Probe choices abound. Just pick the probe type (flexible-obedient or soft metal), probe diameter (3.9mm, 4.9mm, 5.5mm or 6m), probe length (0.75 to 30m) and viewing angle (front view, articulating or switchable front/side view) you need; one of our probes is sure to fill the bill.
- The borescopes themselves also come in several flavors—for example, wired or wireless, and recording or non-recording. Whichever model you choose, your high-performance borescope will have passed a 60,000-cycle performance test, sport a color monitor, and come in a custom protective hard case.

# Clamp Meter Comparison Chart

Modern clamp meters combine a voltmeter and a current meter. Because the current meter responds to voltages induced by flows in the conductor within its jaws, clamp meters can measure larger currents than a multimeter – and in a safer manner.

U.S. General Services Administration (GSA) Schedule Contracts are long-term, government-wide contracts between commercial firms and the GSA designed to give federal consumers (e.g., federal agencies and the military) access to commercial products and services at fair, reasonable and competitive prices. Such contracts comply with the Trade Agreements Act (TAA) of 1979, which requires that purchased products and services were manufactured or “substantially transformed” in a “designated country”. Taiwan is a TAA-designated country; China is not.
