

THE POWER OF PROTECTION

Since 1967, the Hatch® name has been synonymous with the very finest in protective performance gloves for the law enforcement, tactical, military, medical and industrial safety markets. As part of The Safariland Group, our lineup is the most extensive in the industry, offering advanced designs for cut-resistance, cold weather, impact protection, and much more. We use only the finest leathers, along with synthetic and high-tech materials to ensure that our protective gear performs to the world's most uncompromising standards.

THE RIGHT MATERIAL FOR THE RIGHT JOB

Hatch incorporates high grade materials to enhance the features required for each application. For example, our duty gloves are made of sheepskin leather to provide an enhanced sense of touch whilst conducting a field search.

BROAD, ALL-INCLUSIVE PRODUCT LINE

Hatch provides hand protection for law enforcement, military, shooting and other tactical applications.

INTENTIONAL RESEARCH AND DEVELOPMENT

Each product development series begins with a general survey of the market, gathering input from end users and observation in the field. Then with prototypes in hand, field testing is conducted, final adjustments made and a product is ready for introduction to the market.

5 POINTS OF INNOVATION

TOUCHSCREEN-COMPATIBLE KNUCKLE FOR USE WITH ELECTRONICS

The knuckle pad provides the ability to quickly swipe the phone to take or send a call without having to remove gloves or worry about contaminating the device.

ARTICULATED STRAP

Accommodates a larger watch as it is angled away from the wrist.

HATCH PATENTED CUT-RING

This feature allows for the optional removal of the index finger for trigger control, without unraveling the remaining edge.

HATCH SIGNATURE ERGO-CUT™ THUMB PATTERN FOR AN ACCURATE AND COMFORTABLE FIT

Conforms to the natural curvature of the hand and offers greater dexterity and freedom of movement than a "single palm pattern". Because we have opposable thumbs, a single piece palm bunches up and twists on the thumb when the hands are clasped

ALL-SOFT CUFF TO FLEX AROUND A WATCH ON THE WRIST

Many gloves are primarily made with a "ridged cuff", which is actually a detriment to a watch wearer in that the cuff then has to be pushed over or under the watch. With a soft compression cuff, the cuff gently compresses around the watch during wrist flexion, and allows the watch to be usable without having to constantly adjust the cuff.
