WARNING

FAILURE TO HEED THE FOLLOWING WARNINGS MAY RESULT IN PERSONAL INJURY AND/OR PROPERTY DAMAGE.

- 1 Herkules will not be held responsible for any personal injury and/or property damaged caused due to owner/operator failure to follow the warnings and cautions listed in this manual.
- 2 Read and understand all warnings, cautions and instructions before operating this equipment.
- 3 It is the owner/operators responsibility to maintain the legibility of all warning and instruction labels.
- 4 Do not alter or modify any part of this equipment.
- 5 Do not attempt to bypass the door/latch interlock system. The door interlock is provided for operator safety.
- 6 DO NOT open the door while the unit is operating. Always wait for the crusher to cycle completely.
- 7 Crush only intended matter for the crusher.
- 8 Always wear safety glasses when operating the crusher.
- 9 Always wear suitable industrial gloves when handling crushed objects to prevent injury.
- 10 Check equipment regularly for proper operation and repair or replace worn or damaged parts immediately.
- 11 Any crusher that appears to be damaged in any way, is badly worn or operates abnormally shall be removed from use until repairs are made. Use only manufacturer's approved accessories and service parts. Contact a factory authorized service center for repairs.
- 12 DO NOT REMOVE THIS LABEL. REPLACE IF DAMAGED.

Model Information

SPECIFICATIONS

Maximum crushing pressure	3.75 tons
Capacity	One filter
Filter type	Car/light truck
Filter crush	Up to 80%
Residual oil removed from crushed filter	95 - 98%
Time to crush filter	15 - 30 seconds
Overall width	30"
Overall height	69-1/4"
Overall depth	13"
Chamber width	10"
Chamber height	11-1/2"
Chamber depth	10"
Required air pressure	100-120 p.s.i.
Total weight	250 lbs.

DESCRIPTION

Model OFC1 is a production crusher capable of crushing one filter at one time. The crusher is designed for automotive and light truck shops to crush and dispose of used oil filters in an environmentally correct manner. The crusher provides the following features:

- Powerful 3.75 ton cylinder assures the force necessary to do the job when crushing oil filters.
- Operates with external air only. No electric power is required.
- Safe double lock door protects operator.
- Removes 95-98% of residual oil from oil filter.
- Easy connection for oil drain off.
- One oil filter capacity.

OWNER/OPERATOR RESPONSIBILITY

It is the responsibility of the owner/operator to properly use and maintain this equipment.

The instructions and warnings contained in this manual shall be read and understood by the owner/operator prior to operating this equipment.

If an owner/operator does not understand English, the contents of this manual shall be explained in the owner/operator native language to assure the owner/operator comprehends.

It is the responsibility of the owner/operator to maintain the legibility of all warning and Instruction labels.

The owner/operator shall retain this manual for future reference to important warnings, operating and maintenance instructions.

INSTALLATION

- 1 Bolt stabilizer feet to the bottom of the stand with the 3/8-16 X 3/4" bolts.
- 2 Bolt cabinet to stand with the 3/8-16 X 2-1/2" bolts, nuts and washers provided.
- 3 Assemble the Filter/Regulator assembly using a thread sealer. Note: Make sure that the arrows are pointing toward the unit (see fig 1).

- 4 Fill the oiler with 30W non-detergent oil before attaching airline. NEVER REMOVE OILER WITH AIR ATTACHED
- 5 Route your airline safely to prevent tripping and possible tipping the machine over. Use an unrestricted airline (no quick connects) at 100-120 psi and 3/8" to 1/2" ID.
- 6 Attach the 3/4" nipple to the bottom of the unit and select a waste oil container to put under the unit. A hose may be run from the outlet to a remote container.
- 7 Turn on air and set regulator to 100-120 psi.

INSPECTION

Prior to operation a visual Inspection shall be made. Check crusher for leaks, worn or missing parts.

Periodically check oil level in oiler. **DO NOT RUN WITHOUT OIL.**

Any crusher that appears to be damaged in any way, is badly worn or operates abnormally shall be removed from use until repairs are made. Contact a factory authorized service center for repairs.

If over pressurizing of the equipment is believed to have occurred, contact a factory authorized service center for inspection of the crusher.

An annual inspection by a factory authorized service center is recommended.

OPERATION

- 1 Turn the external air supply on.
- 2 Verify the pressure gauge on the pressure regulator/filter reads between 100 and 120 p.s.i. Adjust the regulator as required.

NOTE:

If the external air supply is less than 100 p.s.i., the crusher will operate but the crushing performance is reduced.

- 3 Lift the door latch and pull the door down to gain access to the crushing chamber.
- 4 Place one filter, vertically in chamber, open side down.
- 5 Close door and pull down latch handle. The crushing operation will start immediately.
- 6 Within 15-30 seconds, depending on filter size and weight, the filter will be crushed 70-79% of its original size.
- 7 The regulator gauge will show when max pressure is reached. A few seconds at max pressure will give maximum crush.
- 8 Lift door latch and open door.
- 9 Remove the crushed oil filter and dispose of it in an environmentally correct manner. NEVER REACH INSIDE UNIT BEFORE RAM RETURNS TO THE TOP.

WARNING

The crushing mandrel may be still moving when the door is opened. Wait until the mandrel stops before placing hand in chamber.

WARNING

A crushed oil filter may have jagged metal edges. Use good industrial work gloves to protect the hands when removing a crushed oil filter.

SAFETY INFORMATION

Read and understand all warnings, cautions and instructions before operating this equipment. Caution should be used when operating this equipment as personal injury and/or property damage can result from equipment misuse. Adequate personal protection is recommended to prevent splashing of oil on the skin or in the eyes.

- Check crusher and stand mounting for tightness.
- Check stabilizer bolts for tightness.
- Check Air Line and waste oil line for loose connections, constrictions, and non-tripping routings.
- Check that the Air Line delivers 100-120 psi to the crusher Filter-Regulator.

SAFETY OPERATIONS

- Do not crush aerosol cans, glass, or content filled metal containers. Dangerous shrapnel explosions could happen.
- Place only one filter in chamber, vertically only, open side down.
- Never place more than one filter in the crushing chamber at any time.
- Operate only with slip-in tray in place.

MAINTENANCE

- Check oiler level weekly to keep adequate oil in the air cylinder. Use 30W non-detergent or air compressor oil to two-cycle engine oil.
- Turn the drain valve at the bottom of the filter/regulator counterclockwise once a week to release water filtered from the air system.
- Periodically check air and oil fittings for tightness. Check stand and floor mount bolts.
- Remove paper and paint chips from cabinet interior weekly to minimize oil drain blockage.
- Check the ram bolt periodically for tightness.

SERVICE PARTS

Additional Parts not shown:
 Nylon Tubing 5/32"M5
 Nylon Tubing 3/8"M7APE
 Stand Assembly 12144
 Stabilizer Bar10244
